SERVOPACKs

■ Features

Σ -7S SERVOPACKs (Single-axis)

Analog Voltage/Pulse Train Reference Type 326

- 3.1 kHz response frequency and improved vibration suppression

MECHATROLINK-II Communications

Reference Type..... 336

- High-precision motion control.
- 3.1 kHz response frequency and improved vibration suppression

MECHATROLINK-III Communications

Reference Type..... 346

- Real-time communication (communication speed: 100 Mbps).
- High-precision motion control.
- 3.1 kHz response frequency and improved vibration suppression

INDEXER Module-Mounted Type 356

- Simple connection to the host controller with the I/O module.
- Reliable high-speed, high-precision positioning.
- Motion control without use of motion controllers.

DeviceNet Module-Mounted Type 370

- Compliant with the communication specifications of the DeviceNet open field network.
- Monitor information from servo drive with the host controller.
- Full range of positioning functions featured.

FT82/FT83 Specification

(SGM7D Motor Drive Type)..... 382

- High torque, high precision, and a user-friendly design.
- FT83 SERVOPACKs with built-in INDEXER.

Σ -7W SERVOPACKs (Two-axis)

MECHATROLINK-III Communications

Reference Type..... 412

- Two axes can be controlled with a SERVOPACK.
- The regenerative energy of multiple axes can be used as the drive energy.

Σ -7C SERVOPACKs

(Two-axis, with built-in Controllers)

Bus Connection Reference Type 420

- Build small-scale equipment system without PLC using one SERVOPACK.
- Expand functionality by mounting an option unit.
- Reduce burden of designing software when part of the equipment changes.

*1. You can use these models with either a single-phase or three-phase power supply input.

*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model: SGD7S-120A00A008).

*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

*5. Refer to the following manual for details.

 Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual (Manual No.: SIEP S800001 73)

*6. The BTO specification indicates if the SERVOPACK is customized by using the MechatroCloud BTO service.

You need a BTO number to order SERVOPACKs with customized specifications.

Refer to page M-15 for the details on the BTO service.

* This is the net value at the rated load.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

Item		Specification								
Control Method		IGBT-based PWM control, sine wave current drive								
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)								
	With Linear Servomotor	<ul style="list-style-type: none"> Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.) 								
Surrounding Air Temperature*1		-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for derating specifications.  <i>Derating Specifications (page 333)</i>								
Storage Temperature		-20°C to 85°C								
Surrounding Air Humidity		95% relative humidity max. (with no freezing or condensation)								
Storage Humidity		95% relative humidity max. (with no freezing or condensation)								
Vibration Resistance		4.9 m/s ²								
Shock Resistance		19.6 m/s ²

Item		Specification			
Panel Operator		Four push switches			
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ± 10 VDC (effective linearity range: ± 8 V) Resolution: 16 bits Accuracy: ± 20 mV (Typ) Maximum output current: ± 10 mA Settling time ($\pm 1\%$): 1.2 ms (Typ)			
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.			
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.)  <i>Built-In Regenerative Resistor (page 472)</i>			
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal			
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.			
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.			
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules			
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).			
	Applicable Standards*3	ISO13849-1 PLe (Category 3) and IEC61508 SIL3			
Option Module		Fully-Closed Modules and Safety Modules Note: You cannot use a Fully-Closed Module and a Safety Module together.			
Controls	Speed Control	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)		
		Input Signal	Reference Voltage	<ul style="list-style-type: none"> Maximum input voltage: ± 12 V (forward motor rotation for positive reference). 6 VDC at rated speed (default setting). Input gain setting can be changed. 	
			Input Impedance	Approx. 14 k Ω	
			Circuit Time Constant	30 μ s	
		Internal Set Speed Control	Rotation Direction Selection	With Proportional Control signal	
			Speed Selection	With Forward/Reverse External Torque Limit signals (speed 1 to 3 selection). Servomotor stops or another control method is used when both signals are OFF.	
	Position Control	Feedforward Compensation		0% to 100%	
		Output Signal Positioning Completed Width Setting		0 to 1,073,741,824 reference units	
		Input Signals	Reference pulses	Reference Pulse Form	One of the following is selected: Sign + pulse train, CW + CCW pulse trains, and two-phase pulse trains with 90° phase differential
				Input Form	Line driver or open collector
			Maximum Input Frequency	<ul style="list-style-type: none"> Line Driver Sign + pulse train or CW + CCW pulse trains: 4 Mpps Two-phase pulse trains with 90° phase differential: 1 Mpps 	
				<ul style="list-style-type: none"> Open Collector Sign + pulse train or CW + CCW pulse trains: 200 kpps Two-phase pulse trains with 90° phase differential: 200 kpps 	
		Input Multiplication Switching	1 to 100 times		
		Clear Signal		Position deviation clear Line driver or open collector	
	Torque Control	Input Signal	Reference Voltage	<ul style="list-style-type: none"> Maximum input voltage: ± 12 V (forward torque output for positive reference). 3 VDC at rated torque (default setting). Input gain setting can be changed. 	
			Input Impedance	Approx. 14 k Ω	
			Circuit Time Constant	16 μ s	

- *1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVO-PACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable range cannot be increased by derating.
- *2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

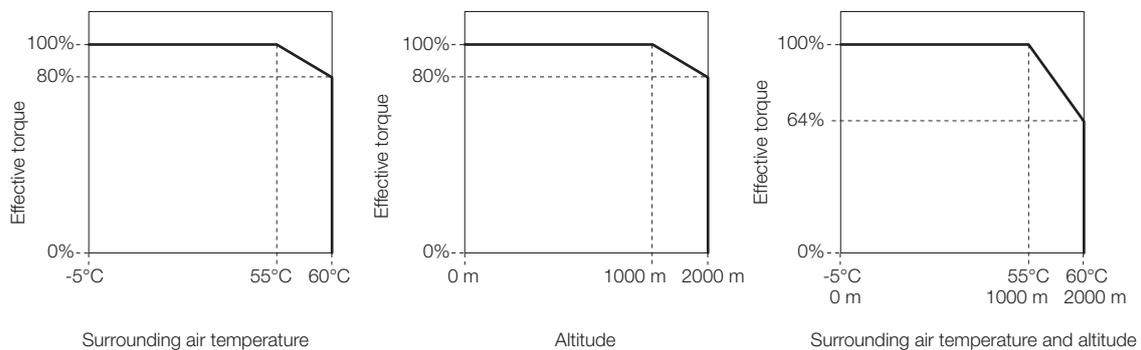

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

- *3. Always perform risk assessment for the system and confirm that the safety requirements are met.

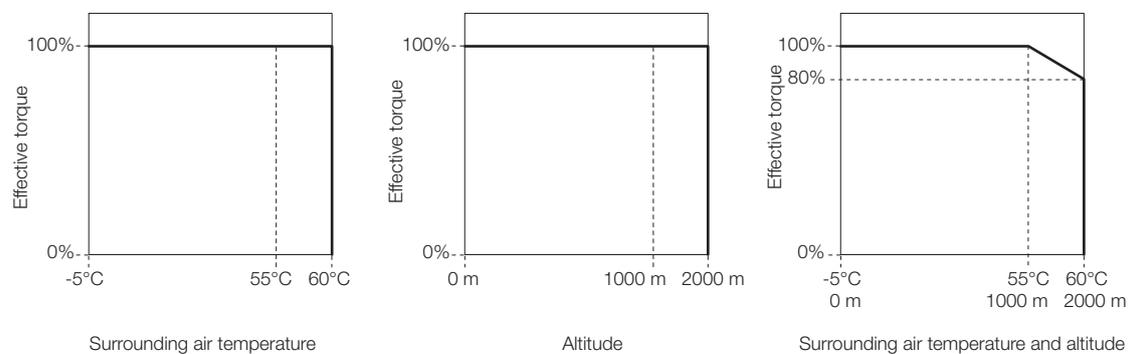

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

◆ SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

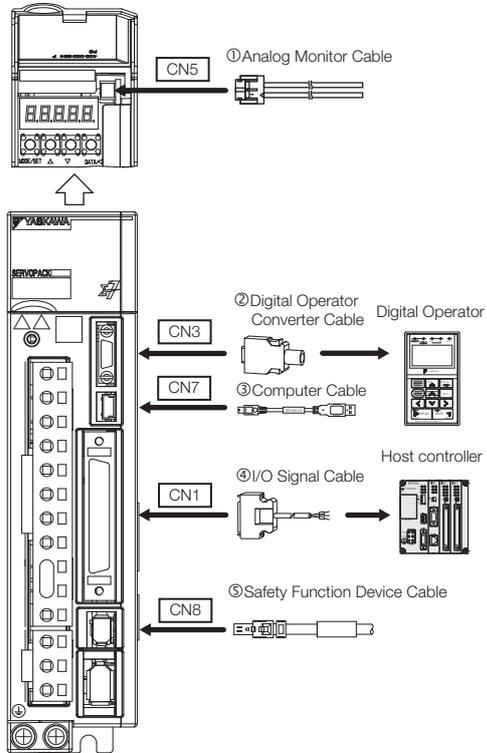

◆ SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)*

Code	Name	Length (L)	Order Number	Appearance	
①	Analog Monitor Cable	1 m	JZSP-CA01-E		
②	Digital Operator Converter Cable	0.3 m	JZSP-CVS05-A3-E*1

			2 m	JZSP-CSI01-2-E	
			3 m	JZSP-CSI01-3-E	
⑤	Safety Function Device Cables	Cables with Connectors*2	1 m	JZSP-CVH03-01-E	
			3 m	JZSP-CVH03-03-E	
		Connector Kit*3	Contact Tyco Electronics Japan G.K. Product name: Industrial Mini I/O D-shape Type 1 Plug Connector Kit Model number: 2013595-1		

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVOPACKs.

*2. When using safety functions, connect this Cable to the safety function devices.
When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*3. Use the Connector Kit when you make cables yourself.

*1. You can use these models with either a single-phase or three-phase power supply input.

*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model: SGD7S-120A10A008).

*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

*5. Refer to the following manual for details.

📖 *Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual* (Manual No.: SIEP S800001 73)

*6. The BTO specification indicates if the SERVOPACK is customized by using the MechatroCloud BTO service.

You need a BTO number to order SERVOPACKs with customized specifications.

Refer to page M-15 for the details on the BTO service.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

Item		Specification								
Control Method		IGBT-based PWM control, sine wave current drive								
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)

SERVOPACKs

Σ-7S Single-axis MECHATROLINK-II Communications Reference SERVOPACKs

Continued from previous page.

Item		Specification
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.)  Built-In Regenerative Resistor (page 472)
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Option Module		Fully-Closed Modules and Safety Modules Note: You cannot use a Fully-Closed Module and a Safety Module together.

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVO-PACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

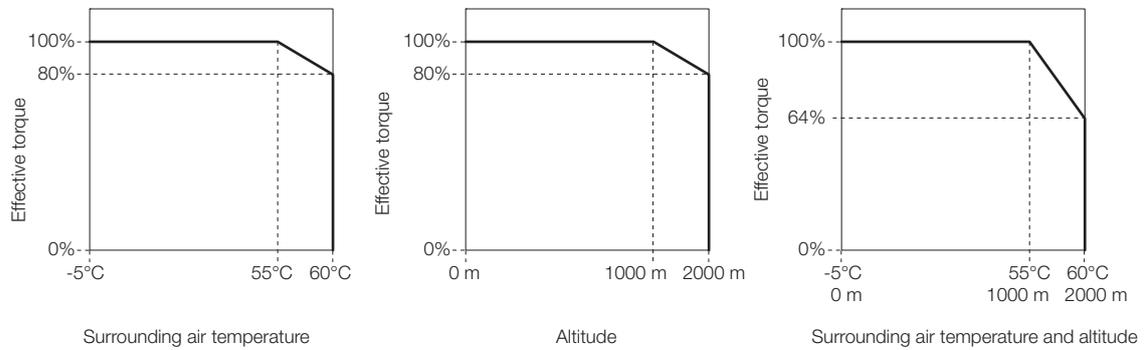

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

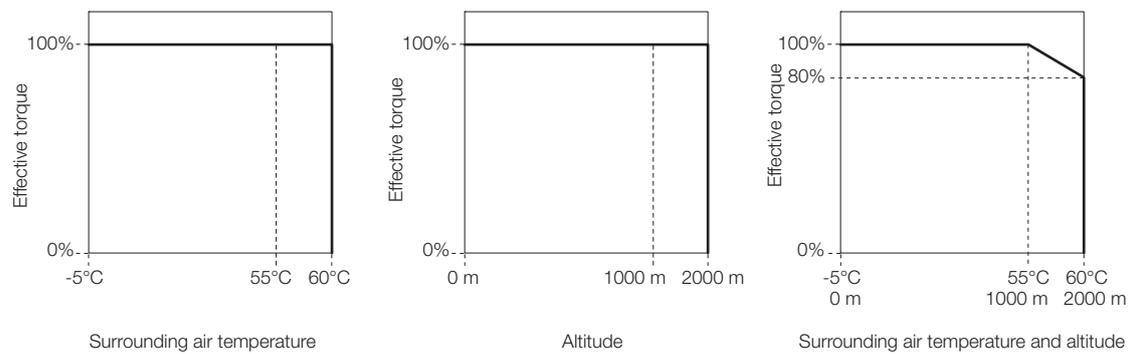

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

◆ SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

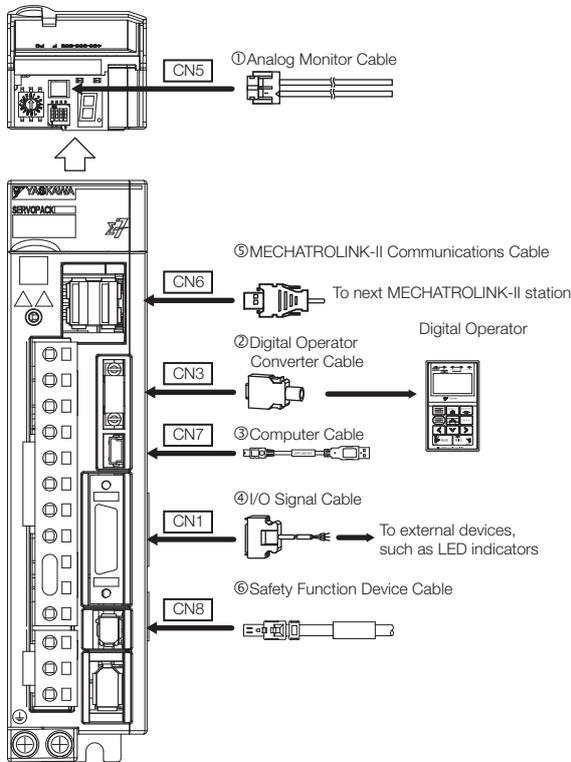

◆ SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

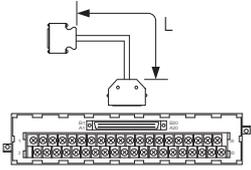

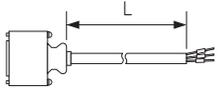

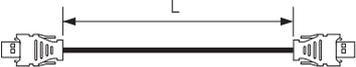

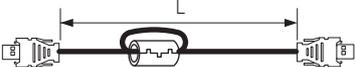

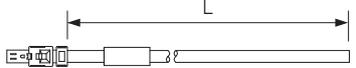

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

	Connector Kit* ³	Contact Tyco Electronics Japan G.K. Product name: Industrial Mini I/O D-shape Type 1 Plug Connector Kit Model number: 2013595-1			

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVOPACKs.

*2. When using safety functions, connect this Cable to the safety function devices.
When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*3. Use the Connector Kit when you make cables yourself.

*1. You can use these models with either a single-phase or three-phase power supply input.

*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model: SGD7S-120A20A008).

*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

*5. Refer to the following manual for details.

📖 *Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual* (Manual No.: SIEP S800001 73)

*6. The BTO specification indicates if the SERVOPACK is customized by using the MechatroCloud BTO service.

You need a BTO number to order SERVOPACKs with customized specifications.

Refer to page M-15 for the details on the BTO service.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

Item		Specification								
Drive Method		IGBT-based PWM control, sine wave current drive								
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)								
	With Linear Servomotor	<ul style="list-style-type: none"> Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.) 								
Surrounding Air Temperature*1		-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for derating specifications.  <i>Derating Specifications (page 353)</i>								
Storage Temperature		-20°C to 85°C								
Surrounding Air Humidity		95% relative humidity max. (with no freezing or condensation)								
Storage Humidity		95% relative humidity max. (with no freezing or condensation)

SERVOPACKs

Σ-7S Single-axis MECHATROLINK-III Communications Reference SERVOPACKs

Continued from previous page.

Item		Specification
MECHATROLINK-III Communications Setting Switches		Rotary switch (S1 and S2) positions: 16 Number of DIP switch (S3) pins: 4
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.)  <i>Built-In Regenerative Resistor (page 472)</i>
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Option Module		Fully-Closed Modules and Safety Modules Note: You cannot use a Fully-Closed Module and a Safety Module together.

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

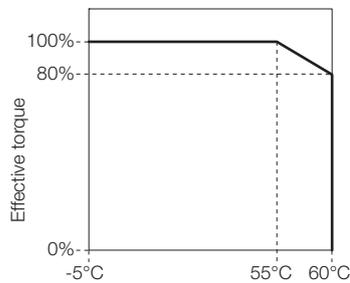

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

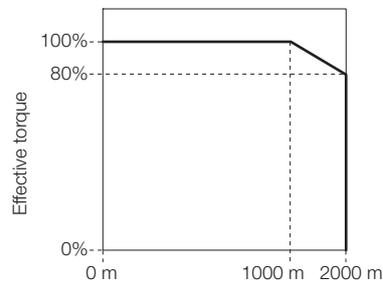

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

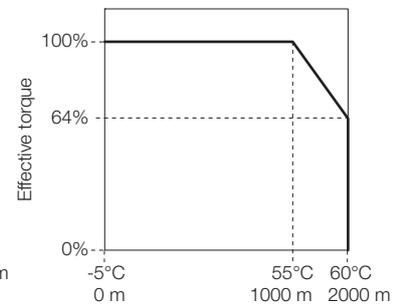

◆ SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

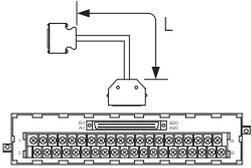

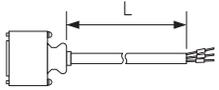

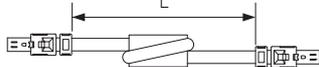

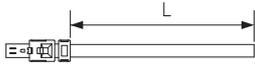

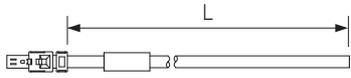

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
 - Order numbers and specifications of individual connectors for cables
- 📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)*

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVOPACKs.

*2. If you use a MECHATROLINK-III Communications Reference SERVOPACK, this Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

*3. When using safety functions, connect this Cable to the safety function devices.

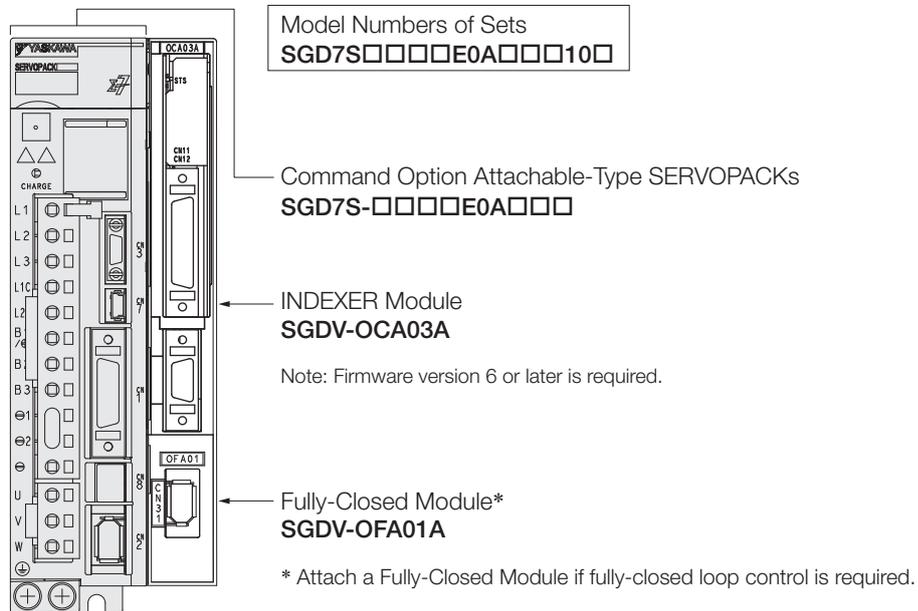

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*4. Use the Connector Kit when you make cables yourself.

Σ-7S Single-axis INDEXER Module-Mounted SERVOPACKs

Configuration

A Σ-7S Single-axis INDEXER Module-Mounted SERVOPACK is a Command Option Attachable-Type SERVOPACK with an INDEXER Module mounted on the side of the SERVOPACK. Positioning with single-axis control can be performed by using program table operation and other functions.

Purchase Order Number

Purchasing a Module in a Set with the SERVOPACK

To order SERVOPACKs with a INDEXER Module attached, use the following model numbers.

INDEXER Module Power Loss

The power supply for an INDEXER Module is supplied from the control power supply of the SERVO-PACK. The power loss is given in the following table.

Item	Specification
Power Supply Method	5.05 VDC
Maximum Operating Voltage	5.25 VDC
Maximum Operating Current	500 mA
Maximum Power Loss	2.6 W

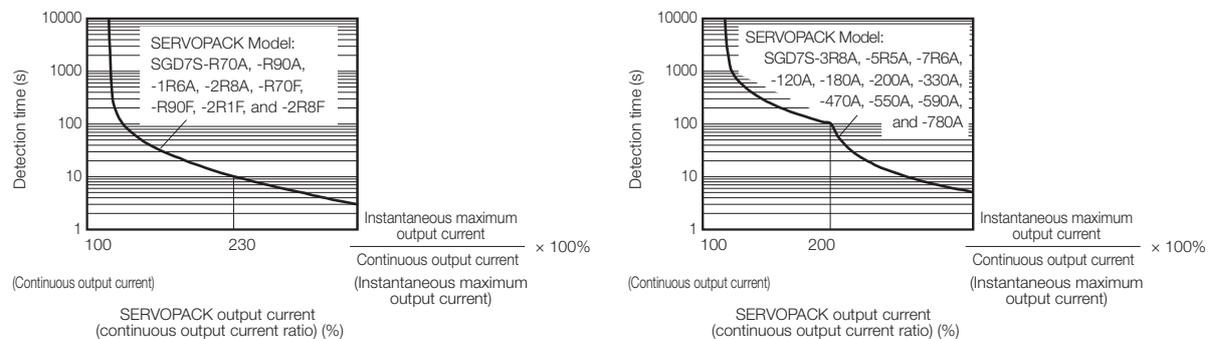

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

The specifications when the INDEXER Module is combined with a Command Option Attachable-Type SERVOPACK are given in the following table.

Item		Specification	
Control Method		IGBT-based PWM control, sine wave current drive	
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)	
	With Linear Servomotor	<ul style="list-style-type: none"> Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.) 	
Environmental Conditions	Surrounding Air Temperature	0°C to 55°C	
	Storage Temperature	-20°C to 85°C	
	Surrounding Air Humidity	90% relative humidity max. (with no freezing or condensation)	
	Storage Humidity	90% relative humidity max. (with no freezing or condensation)	
	Vibration Resistance	4.9 m/s ²	
	Shock Resistance	19.6 m/s ²	
	Degree of Protection	Class	SERVOPACK Model: SGD7S-
		IP20	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, R70F, R90F, 2R1F, 2R8F
		IP10	120AE0A008, 180A, 200A, 330A, 470A, 550A, 590A, 780A
	Pollution Degree	2 <ul style="list-style-type: none"> Must be no corrosive or flammable gases. Must be no exposure to water, oil, or chemicals. Must be no dust, salts, or iron dust. 	
Altitude	1,000 m max.		
Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity		
Applicable Standards		UL 61800-5-1 (E147823), CSA C22.2 No.274, EN ISO13849-1: 2015, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, EN 61800-5-1, IEC 60204-1, IEC 61508 series, IEC 62061, IEC 61800-5-2, and IEC 61326-3-1	
Mounting	Mounting	SERVOPACK Model: SGD7S-	
	Base-mounted	All Models	
	Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A, R70F, R90F, 2R1F, 2R8F	
	Duct-ventilated	470A, 550A, 590A, 780A	
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)	
	Coefficient of Speed Fluctuation* ¹	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)	
		0% of rated speed max. (for a voltage fluctuation of ±10%)	
		±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)	
Torque Control Precision (Repeatability)	±1%		
Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)		
I/O Signals	Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.	
	Overheat Protection Input	Number of input points: 1 Input voltage range: 0 V to +5 V

SERVOPACKs

Σ-7S Single-axis INDEXER Module-Mounted SERVOPACKs

Continued from previous page.

Item		Specification	
Communications	RS-422A Communications (CN3)	Interfaces	Digital Operator (JUSP-OP05A-1-E) and personal computer (with SigmaWin+)
		1:N Communications	Up to N = 15 stations possible for RS-422A port
		Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interfaces	Interface Personal computer (with SigmaWin+)
Communications Standard		Conforms to USB2.0 standard (12 Mbps).	
Displays/Indicators	SERVOPACK	CHARGE and PWR indicators, and one-digit seven-segment display	
	INDEXER Module	Refer to the following manual for details.  <i>Σ-7-Series AC Servo Drive Σ-7S SERVOPACK Command Option Attachable Type with INDEXER Module Product Manual (Manual No.: SIEP S800001 64)</i>	
Operating Methods	Program Table Method	<ul style="list-style-type: none"> • Program table positioning in which steps are executed sequentially by commands given through contact input or serial communications • Positioning in which station numbers are specified by commands given through contact input or serial communications 	
	Max. Number of Steps	256	
	Max. Number of Tables	256	
	Max. Number of Stations	256	
	Serial Communications Method	Serial command by 1-channel ASCII code Communications specifications: RS-422/485 (50 m max.) Connection topology: Multi-drop connection (16 axes max.) Baud rate: 9600, 19200, 38400 bps	
Other Functions	Registration (positioning by external signals), origin return		
Analog Monitor (CN5)	Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)		
Dynamic Brake (DB)	Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.		
Regenerative Processing	Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to the following section for details.  <i>Built-In Regenerative Resistor (page 472)</i>		
Overtravel (OT) Prevention	Stopping with a dynamic brake (DB), coasting to a stop, performing a hard stop, or performing a smooth stop (decelerating to a stop) for a CCW-OT (CCW Drive Prohibit Input) signal or CW-OT (CW Drive Prohibit Input) signal.		
Protective Functions	Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.		
Utility Functions	Gain adjustment, alarm history, jogging, origin search, etc.		
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules	
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).	
	Applicable Standards*2	ISO13849-1 PLe (Category 3), IEC61508 SIL3	
Applicable Option Modules	Fully-Closed Module Note: You cannot use a Safety Module if you are using an INDEXER Module.		

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

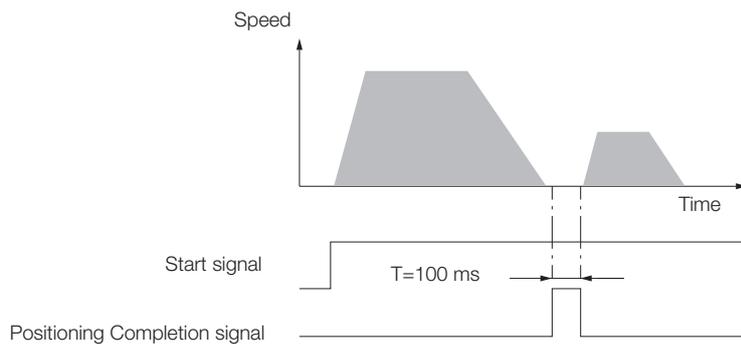

Reference Methods

The INDEXER Module has two reference methods: digital I/O and serial commands. These command methods are described in the following sections.

Digital I/O is used with a program table (mode 0) or a jog speed table (mode 1). You can use a program table (mode 0) to execute the program steps that you select with I/O signal patterns (binary format). If the jog speed table (mode 1) is being used, the jog speed selected with the input signal pattern (binary format) can be executed.

- Program Table

PGMSTEP	POS	SPD	RDST	RSPD	ACC*	DEC*	EVENT	LOOP	NEXT
0	I+400000	2000	500000	1000	200	100	T5000	1	1
1	I+100000	1000	200000	2000	100	50	IT0	1	END
⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮
n	I+400000	2000	500000	1000	100	50	IT100	1	n+1

255	I+100000	1000	200000	2000	100	50	DT0	1	END

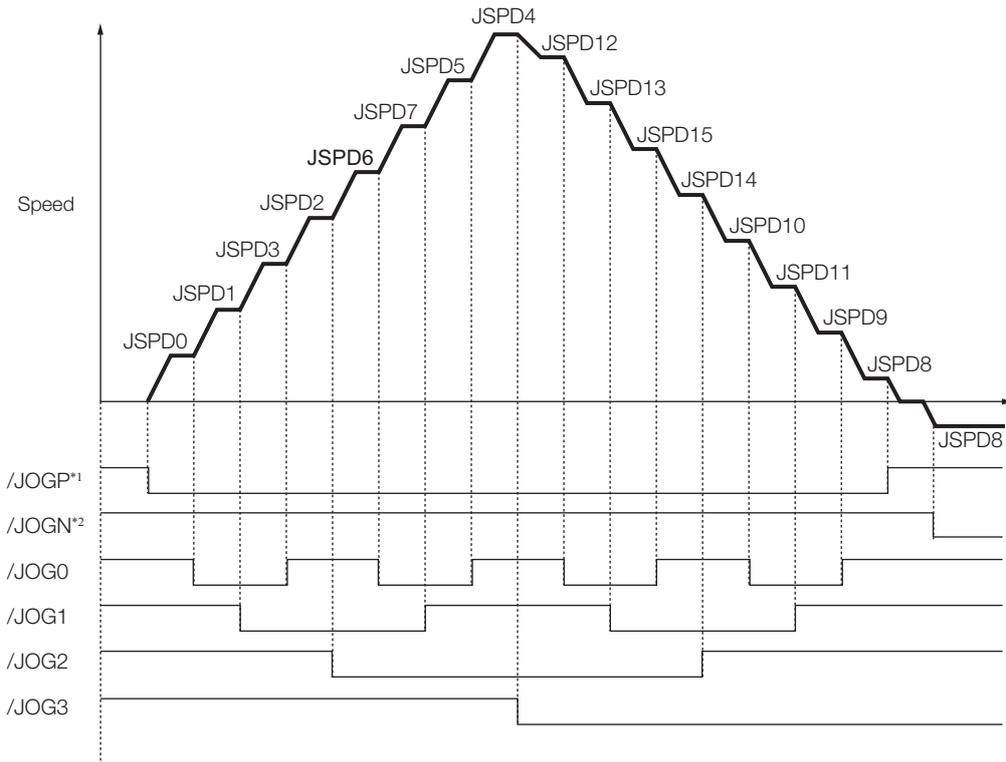

• Jog Speed Table

JSPD	JOG3	JOG2	JOG1	JOG0	Jog Speed
0	0	0	0	0	1000
1	0	0	0	1	2000
2	0	0	1	0	4000
⋮	⋮	⋮	⋮	⋮	⋮
⋮	⋮	⋮	⋮	⋮	⋮
⋮	⋮	⋮	⋮	⋮	⋮
15	1	1	1	1	5500

16 combinations

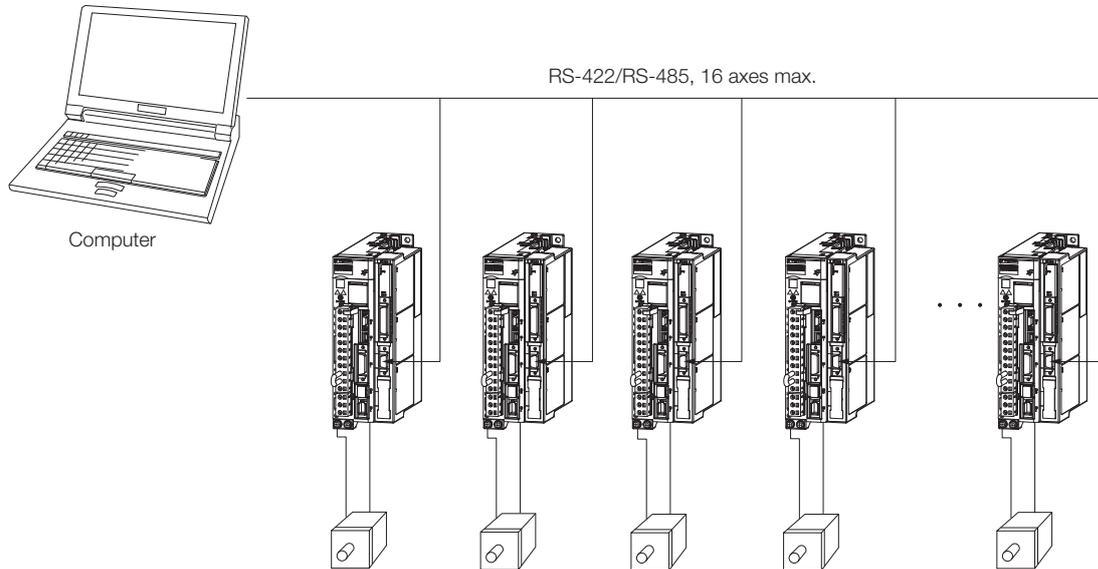

Note: 1: Signal is ON (active), 0: Signal is OFF (inactive).

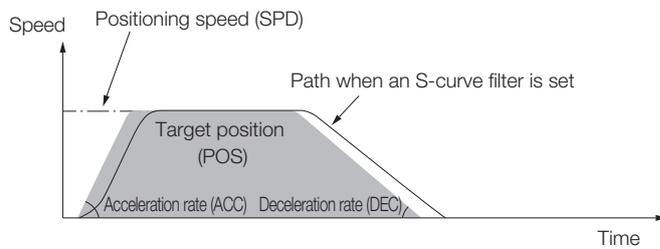

*1. Forward operation at the jog speed is performed while the /JOGP signal is ON.

*2. Reverse operation at the jog speed is performed while the /JOGN signal is ON.

With serial commands, ASCII command strings are sent to the INDEXER Module through RS-422 or RS-485 communications and these commands are interpreted and executed immediately. You can use general-purpose serial communications (RS422/RS485) to perform independent control of up to 16 axes from one host controller (e.g., PC or HMI).

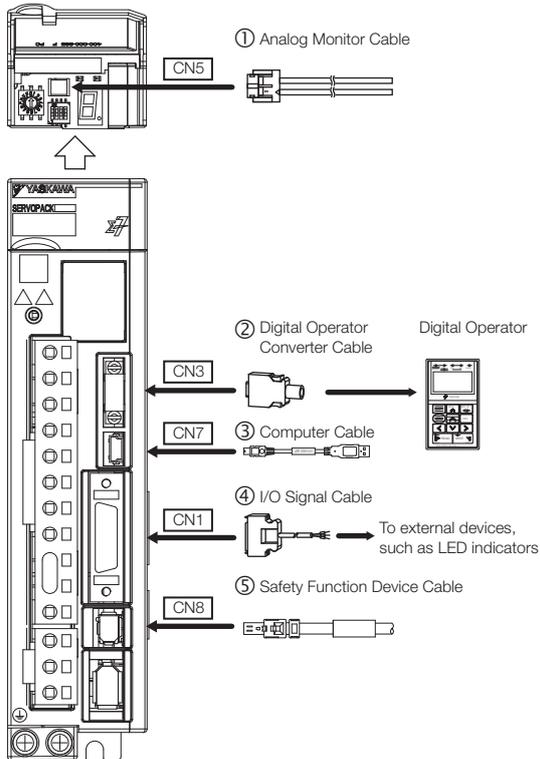

1SVON	# Servo turned ON.
1POSI=400000	# Set relative position to 400,000.
1SPD=2000	# Set speed to 2,000.
1ACC=200	# Set acceleration rate to 200.
1DEC=100	# Set deceleration rate to 100.
1ST	# Start operation.

Selecting Cables

◆ System Configurations

■ Σ-7S Single-axis Command Option Attachable-Type SERVOPACKs

■ Command Option Module: INDEXER Module

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

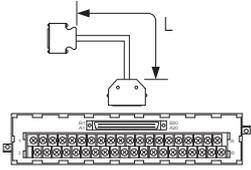

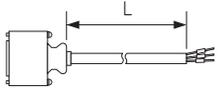

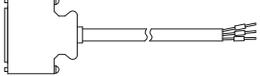

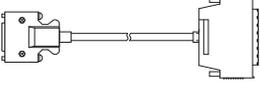

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)*

Code	Name	Length (L)	Order Number	Appearance

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVOPACKs.

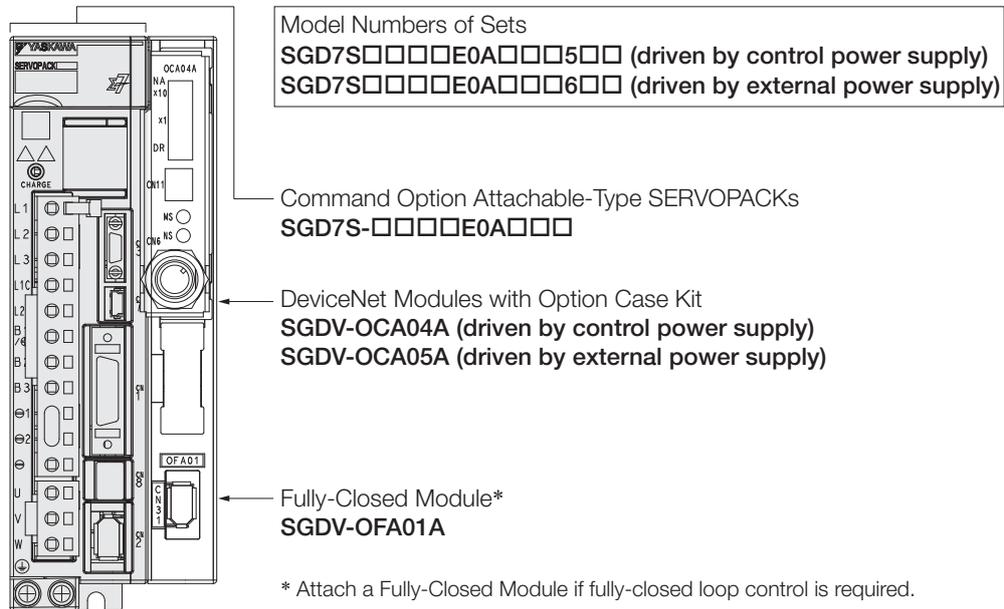

*2. When using safety functions, connect this Cable to the safety function devices.
When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*3. Use the Connector Kit when you make cables yourself.

Σ-7S Single-axis DeviceNet Module-Mounted SERVOPACKs

Configuration

A Σ-7S Single-axis DeviceNet Module-Mounted SERVOPACK is a Command Option Attachable-Type SERVOPACK with a DeviceNet Module mounted on the side of the SERVOPACK. Positioning and origin returns can be performed by sending commands from the host controller (DeviceNet master).

Purchase Order Number

Purchasing a Module in a Set with the SERVOPACK

To order SERVOPACKs with a DeviceNet Module attached, use the following model numbers.

*1. You can use these models with either a single-phase or three-phase power supply input.

*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model: SGD7S-120AE0A008).

*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

*5. Refer to the following manual for details.

 Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual (Manual No.: SIEP S800001 73)

*6. The BTO specification indicates if the SERVOPACK is customized by using the MechatroCloud BTO service.

You need a BTO number to order SERVOPACKs with customized specifications.

Refer to page M-15 for the details on the BTO service.

◆ DeviceNet Modules

SGDV-OCA04A (driven by control power supply)

SGDV-OCA05A (driven by external power supply)

Important

The DeviceNet Module is equipped with an Option Case Kit. (Option Case Kits do not need to be ordered separately.)

◆ Fully-Closed Module

DeviceNet Module Ratings

The power supply method and power loss of a DeviceNet Module depend on the model of the DeviceNet Module.

◆ SGDV-OCA04A (Interface: Driven by Control Power Supply)

The specifications of the SGDV-OCA04A DeviceNet Module are given in the following table.

Item	Specification	
	DeviceNet Communications Section	Control Section
Power Supply Method	Supplied from the DeviceNet communications cable.	Supplied from the control power supply of a Command Option Attachable-Type SERVOPACK.
Minimum Operating Voltage	11 VDC	Included in the current consumption of the Command Option Attachable-Type SERVOPACK.
Maximum Operating Voltage	25 VDC	
Maximum Operating Current	25 mA	
Maximum Power Loss	625 mW	

◆ SGDV-OCA05A (Interface: Driven by External Power Supply)

The specifications of the SGDV-OCA05A DeviceNet Module are given in the following table.

Item	Specification	
	DeviceNet Communications Section	Control Section
Power Supply Method	Supplied from the DeviceNet communications cable.	
Minimum Operating Voltage	11 VDC	
Maximum Operating Voltage	25 VDC	
Maximum Operating Current	100 mA for 24-VDC power supply 200 mA for 11-VDC power supply	
Maximum Power Loss	2.4 W	

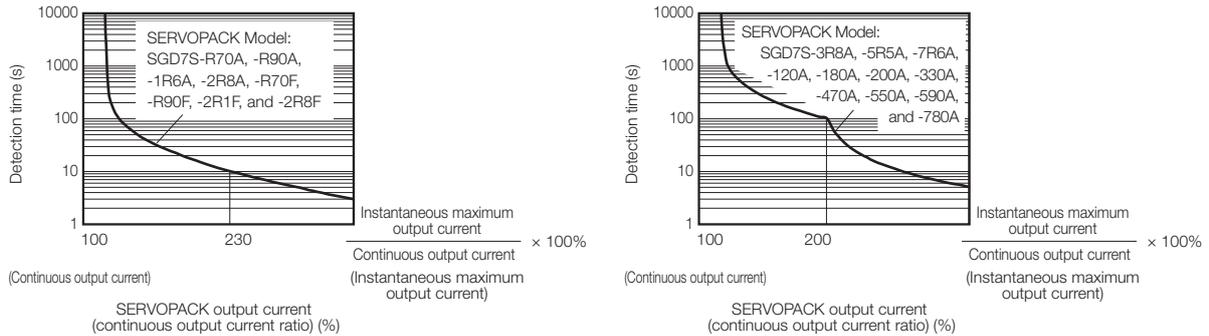

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

The specifications when the DeviceNet Module is combined with a Command Option Attachable-Type SERVOPACK are given in the following table.

Item		Specification						
Control Method		IGBT-based PWM control, sine wave current drive						
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)						
	With Linear Servomotor	<ul style="list-style-type: none"> Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.) 						
Surrounding Air Temperature		0°C to 55°C						
Storage Temperature		-20°C to 85°C						
Surrounding Air Humidity		90% relative humidity max. (with no freezing or condensation)						
Storage Humidity		90% relative humidity max. (with no freezing or condensation)						
Vibration Resistance		4.9 m/s ²						
Shock Resistance		19.6 m/s ²						
Environmental Conditions	Degree of Protection	<table border="1"> <thead> <tr> <th>Class</th> <th>SERVOPACK Model: SGD7S-</th> </tr> </thead> <tbody> <tr> <td>IP20</td> <td>R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, R70F, R90F, 2R1F, 2R8F</td> </tr> <tr> <td>IP10</td> <td>120AE0A008, 180A, 200A, 330A, 470A, 550A, 590A, 780A</td> </tr> </tbody> </table>	Class	SERVOPACK Model: SGD7S-	IP20	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, R70F, R90F, 2R1F, 2R8F	IP10	120AE0A008, 180A, 200A, 330A, 470A, 550A, 590A, 780A

Communications Standard			Conforms to USB2.0 standard (12 Mbps).
Displays/Indicators	SERVOPACK		CHARGE and PWR indicators, and one-digit seven-segment display
	DeviceNet Module		Refer to the following manual for details.  <i>Σ-7-Series AC Servo Drive Σ-7S SERVOPACK Command Option Attachable Type with DeviceNet Module Product Manual (Manual No.: SIEP S800001 70)</i>
Operating Methods	Reference Method	Operation Specifications	Positioning via DeviceNet communications.
		Reference Inputs	DeviceNet communications Commands: Movement references (positioning or speed) and origin returns
	Position Control Functions	Acceleration/Deceleration Methods	Linear, asymmetrical, exponential, and S-curve acceleration/deceleration
		Operating Methods	Simple positioning, origin returns, continuous operation, and switching to positioning
		Fully-Closed Loop Control	Supported.
	Built-in Functions	Position Data Latching	Position data can be latched on phase C, the origin signal, or an external signal.
	DeviceNet Communications	Communications Methods	DeviceNet I/O communications and explicit messages
		Topology	Multidrop or T-branching* ²
Baud Rate		125 kbps, 250 kbps, or 500 kbps (Set on rotary switch (DR).)	
Cables		Special cables (OMRON DCA1-5CN02F1 Cable with Connectors or the equivalent.)	
Maximum Number of Nodes		64 nodes (including the master, Maximum number of slaves: 63)	
Node Address Setting	0 to 63 (Set on NA x10 and x1 rotary switches.)		
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)	
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.	
Regenerative Processing		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to the following section for details.  <i>Built-In Regenerative Resistor (page 472)</i>	

Continued on next page.

Continued from previous page.

Item		Specification
Overtravel (OT) Prevention		Stopping with a dynamic brake (DB), coasting to a stop, performing a hard stop, or smooth stop (decelerating to a stop) for a CCW-OT (CCW Drive Prohibit Input) signal or CW-OT (CW Drive Prohibit Input) signal.
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards* ³	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-Closed Module Note: You cannot use a Safety Module if you are using a DeviceNet Module.

*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*2. Externally connected terminating resistance is required.

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

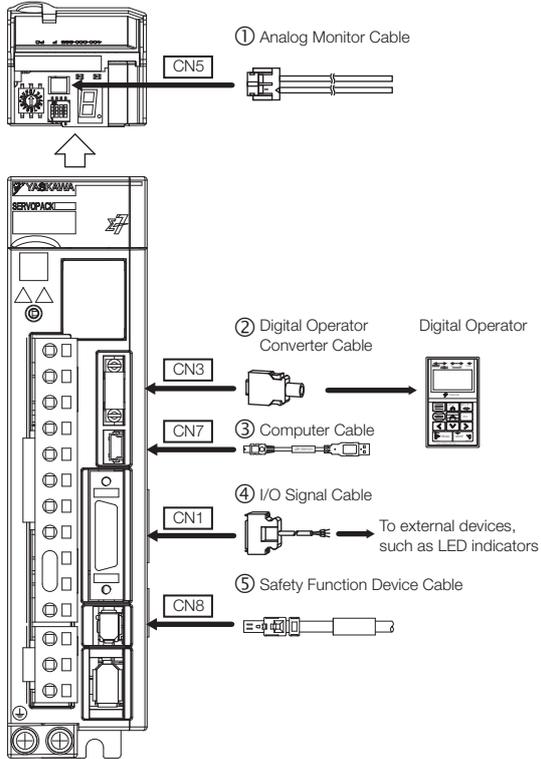

The following table gives the specifications of the DeviceNet Module.

Item		Specification	
		SGDV-OCA04A	SGDV-OCA05A
Mounting Location		Mounted to the side of a Command Option Attachable-Type SERVOPACK.	
Power Supply Method	Control Section	Supplied from the control power supply of a Command Option Attachable-Type SERVOPACK.	Supplied from the DeviceNet communications cable.
	DeviceNet Communications Section	Supplied from the DeviceNet communications cable.	
Current Consumption	Control Section	Included in the current consumption of the Command Option Attachable-Type SERVOPACK.	For 24-VDC power supply: 100 mA max., for 11-VDC power supply: 200 mA max.
	DeviceNet Communications Section	25 mA max.	

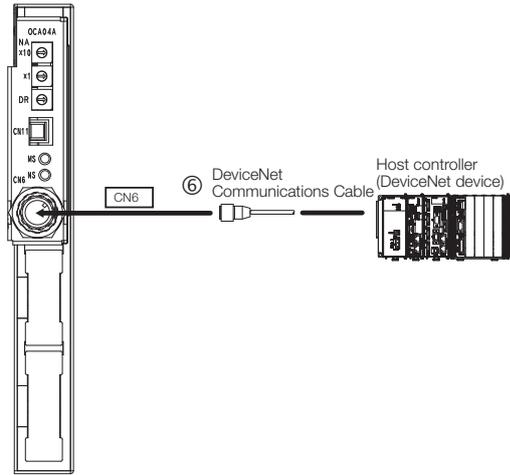

Selecting Cables

◆ System Configurations

■ Σ-7S Single-axis Command Option Attachable-Type SERVOPACKs

■ Command Option Module: DeviceNet Module

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)*

Code	Name	Length (L)	Order Number	Appearance	
①	Analog Monitor Cable	1 m	JZSP-CA01-E		
②	Digital Operator Converter Cable	0.3 m	JZSP-CVS05-A3-E*1		
③	Computer Cable	2.5 m	JZSP-CVS06-02-E		
④	I/O Signal Cables	Soldered Connector Kit	JZSP-CSI9-2-E		
		Connector-Terminal Block Converter Unit (with cable)	0.5 m	JUSP-TA26P-E	
			1 m	JUSP-TA26P-1-E	
			2 m	JUSP-TA26P-2-E	
		Cable with Loose Wires at One End (loose wires on peripheral device end)	1 m	JZSP-CSI02-1-E	
			2 m	JZSP-CSI02-2-E	
3 m	JZSP-CSI02-3-E				
⑤	Safety Function Device Cables	Cables with Connectors*2	1 m	JZSP-CVH03-01-E	
			3 m	JZSP-CVH03-03-E	
		Connector Kit*3	Contact Tyco Electronics Japan G.K. Product name: Industrial Mini I/O D-shape Type 1 Plug Connector Kit Model number: 2013595-1		
⑥	DeviceNet Communications Cable		The communications cable must be an ODVA-Compliant DeviceNet communications cable. We recommend the following Cable. OMRON DCA1-5CN02F1 Cable with Connectors or the equivalent.		

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JUSP-OP05A) for Σ-7-series SERVOPACKs.

*2. When using safety functions, connect this Cable to the safety function devices.
When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*3. Use the Connector Kit when you make cables yourself.

*1. You can use these models with either a single-phase or three-phase power supply input.

*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model: SGD7S-120A□0A008).

*3. This interface is supported only by an INDEXER Module (model: SGD7S-OCA03A).

*4. Refer to the following manual for details.

📖 *Σ-7-Series AC Servo Drive Σ-7S/Σ-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual* (Manual No.: SIEP S800001 73)

*5. Refer to the following manual for details.

📖 *Σ-7-Series AC Servo Drive Σ-7S SERVOPACK with FT/EX Specification for SGM7D Motor Product Manual* (Manual No.: SIEP S800001 91)

*6. The BTO specification indicates if the SERVOPACK is customized by using the MechatroCloud BTO service. You need a BTO number to order SERVOPACKs with customized specifications. Refer to page M-15 for the details on the BTO service.

Ratings and Specifications

Ratings

◆ Three-Phase, 200 VAC

Model SGD7S-		2R8A	120A	
Maximum Applicable Motor Capacity [kW]		0.4	1.5	
Continuous Output Current [Arms]		2.8	11.6	
Instantaneous Maximum Output Current [Arms]		9.3	28	
Main Circuit	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz		
	Input Current [Arms]*	2.5	7.3	
Control	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz		
	Input Current [Arms]*	0.2	0.2	
Power Supply Capacity [kVA]*		1.0	3.2	
Power Loss*	Main Circuit Power Loss [W]	22.5	72.6	
	Control Circuit Power Loss [W]	12	15	
	Built-in Regenerative Resistor Power Loss [W]	–	10	
	Total Power Loss [W]	34.5	97.6	
Regenerative Resistor	Built-In Regenerative Resistor	Resistance [Ω]	–	20
		Capacity [W]	–	60
	Minimum Allowable External Resistance [Ω]		40	20
Overvoltage Category		III		

* This is the net value at the rated load.

◆ Single-Phase, 200 VAC

Model SGD7S-		2R8A	120A	
Maximum Applicable Motor Capacity [kW]		0.4	1.5	
Continuous Output Current [Arms]		2.8	11.6	
Instantaneous Maximum Output Current [Arms]		9.3	28	
Main Circuit	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz		
	Input Current [Arms]*	5.0	16	
Control	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz		
	Input Current [Arms]*	0.2	0.25	
Power Supply Capacity [kVA]*		1.2	4.0	
Power Loss*	Main Circuit Power Loss [W]	23.7	71.8	
	Control Circuit Power Loss [W]	12	16

	Total Power Loss [W]	35.7	103.8	
Regenerative Resistor	Built-In Regenerative Resistor	Resistance [Ω]	–	12
		Capacity [W]	–	60
	Minimum Allowable External Resistance [Ω]		40	12
Overvoltage Category		III		

* This is the net value at the rated load.

SERVOPACKs

Σ-7S Single-axis FT82 SERVOPACKs SGM7D Motor Drive

◆ Single-phase, 100 VAC

Model SGD7S-		2R8F
Maximum Applicable Motor Capacity [kW]		0.4
Continuous Output Current [Arms]		2.8
Instantaneous Maximum Output Current [Arms]		9.3
Main Circuit	Power Supply	100 VAC to 120 VAC, -15% to +10%, 50 Hz/60 Hz
	Input Current [Arms]*	10
Control	Power Supply	100 VAC to 120 VAC, -15% to +10%, 50 Hz/60 Hz
	Input Current [Arms]*	0.38
Power Supply Capacity [kVA]*		1.4
Power Loss*	Main Circuit Power Loss [W]	26.2
	Control Circuit Power Loss [W]	12
	Total Power Loss [W]	38.2
Regenerative Resistor	Minimum Allowable External Resistance [Ω]	40
Overvoltage Category		III

* This is the net value at the rated load.

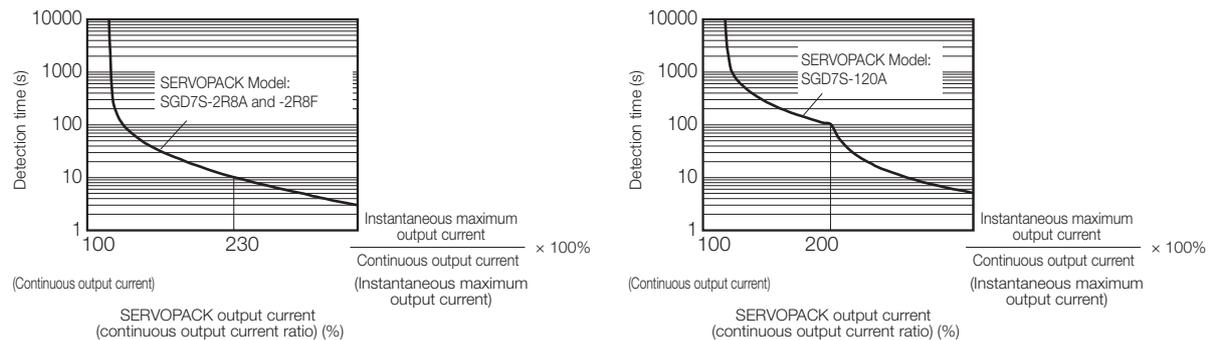

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

◆ FT82 SERVOPACKs with Analog Voltage/Pulse Train References

Item		Specification						
Control Method		IGBT-based PWM control, sine wave current drive						
Feedback		Serial encoder: 24 bits (incremental encoder/absolute encoder)						
Environmental Conditions	Surrounding Air Temperature* ¹	-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for derating specifications.  <i>Derating Specifications (page 397)</i>						
	Storage Temperature	-20°C to 85°C						
	Surrounding Air Humidity	95% relative humidity max. (with no freezing or condensation)						
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)

		Input Signals	Reference pulses	Reference Pulse Form	One of the following is selected: Sign + pulse train, CW + CCW pulse trains, and two-phase pulse trains with 90° phase differential
				Input Form	Line driver or open collector
				Maximum Input Frequency	<ul style="list-style-type: none"> Line Driver Sign + pulse train or CW + CCW pulse trains: 4 Mpps Two-phase pulse trains with 90° phase differential: 1 Mpps Open Collector Sign + pulse train or CW + CCW pulse trains: 200 kpps Two-phase pulse trains with 90° phase differential: 200 kpps
			Input Multiplication Switching	1 to 100 times	
			Clear Signal	Position deviation clear Line driver or open collector	
		Torque Control	Input Signal	Reference Voltage	<ul style="list-style-type: none"> Maximum input voltage: ±12 V (forward torque output for positive reference). 3 VDC at rated torque (default setting). Input gain setting can be changed.
				Input Impedance	Approx. 14 kΩ
	Circuit Time Constant			16 μs	

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable surrounding range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

	Sequence Input Signals	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 7 Input method: Sink inputs or source inputs Input Signals <ul style="list-style-type: none"> • /DEC (Origin Return Deceleration Switch) signal • /EXT1 to /EXT3 (External Latch Input 1 to 3) signals • P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals • /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals • /P-DET (Polarity Detection) signal A signal can be allocated and the positive and negative logic can be changed.
		Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 Output signal: ALM (Servo Alarm) signal
	Sequence Output Signals	Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 3 (A photocoupler output (isolated) is used.) Output Signals <ul style="list-style-type: none"> • /COIN (Positioning Completion) signal • /V-CMP (Speed Coincidence Detection) signal • /TGON (Rotation Detection) signal • /S-RDY (Servo Ready) signal • /CLT (Torque Limit Detection) signal • /VLT (Speed Limit Detection) signal • /BK (Brake) signal • /WARN (Warning) signal • /NEAR (Near) signal A signal can be allocated and the positive and negative logic can be changed.
Communications	RS-422A Communications (CN3)	Interfaces	Digital Operator (JUSP-OP05A-1-E) and personal computer (with SigmaWin+)
		1:N Communications	Up to N = 15 stations possible for RS-422A port
		Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interface	Personal computer (with SigmaWin+)
Communications Standard		Conforms to USB2.0 standard (12 Mbps).	
Displays/Indicators		CHARGE, PWR, CN, L1, and L2 indicators, and one-digit seven-segment display	
MECHATROLINK-III Communications	Communications Protocol	MECHATROLINK-III	
	Station Address Settings	03 to EF hex (maximum number of slaves: 62) The rotary switches (S1 and S2) are used to set the station address.	
	Baud Rate	100 Mbps	
	Transmission Cycle	125 μs, 250 μs, 500 μs, 750 μs, 1.0 ms to 4.0 ms (multiples of 0.5 ms)	
	Number of Transmission Bytes	32 or 48 bytes/station A DIP switch (S3) is used to select the number of transmission bytes.	
Reference Method	Performance	Position, speed, or torque control with MECHATROLINK-III communications	
	Reference Input	MECHATROLINK-III commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)	
	Profile	MECHATROLINK-III standard servo profile	
MECHATROLINK-III Communications Setting Switches		Rotary switch (S1 and S2) positions: 16 Number of DIP switch (S3) pins: 4

Item		Specification
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing		Built-in  <i>Built-In Regenerative Resistor</i> (page 472)
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards*3	ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-closed Modules and Safety Modules Note: You cannot use a Fully-closed Module and a Safety Module together.

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable surrounding range cannot be increased by derating.

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

SERVOPACKs

Σ-7S Single-axis FT82 SERVOPACKs SGM7D Motor Drive

◆ Command Option Attachable-type FT82 SERVOPACKs with INDEXER Modules

The specifications when the INDEXER Module is combined with a Command Option Attachable-type SERVOPACK are given in the following table.

Item		Specification
Control Method		IGBT-based PWM control, sine wave current drive
Feedback		Serial encoder: 24 bits (incremental encoder/absolute encoder)
Environmental Conditions	Surrounding Air Temperature	0°C to 55°C
	Storage Temperature	-20°C to 85°C
	Surrounding Air Humidity	90% relative humidity max. (with no freezing or condensation)
	Storage Humidity	90% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Degree of Protection	IP10
	Pollution Degree	2 <ul style="list-style-type: none"> • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
	Altitude	1,000 m or less.
Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity	
Applicable Standards		UL 61800-5-1 (E147823), CSA C22.2 No.274, EN ISO13849-1: 2015, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, EN 61800-5-1, IEC 60204-1, IEC 61508 series, IEC 62061, IEC 61800-5-2, and IEC 61326-3-1
Mounting		Base-mounted or rack-mounted
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*1	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)
		0% of rated speed max. (for a voltage fluctuation of ±10%)
		±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)
Torque Control Precision (Repeatability)	±1%	
Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)	
I/O Signals	Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.

◆ Selection Table

Important

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be depend-able with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Opera-tion may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

Specifications

◆ FT83 SERVOPACKs with Analog Voltage/Pulse Train References

Item		Specification
Control Method		IGBT-based PWM control, sine wave current drive
Feedback		Serial encoder: 24 bits (incremental encoder/absolute encoder)
Environmental Conditions	Surrounding Air Temperature* ¹	0°C to 55°C
	Storage Temperature	-20°C to 85°C
	Surrounding Air Humidity	90% relative humidity max. (with no freezing or condensation)
	Storage Humidity	90% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Degree of Protection	IP10
	Pollution Degree	2 <ul style="list-style-type: none"> • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
	Altitude* ¹	1,000 m max.
Others		Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electro-magnetic/magnetic fields, or radioactivity
Applicable Standards		UL 61800-5-1 (E147823), CSA C22.2 No.274, EN ISO13849-1: 2015, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, EN 61800-5-1, IEC 60204-1, IEC 61508 series, IEC 62061, IEC 61800-5-2, and IEC 61326-3-1
Mounting		Base-mounted or rack-mounted
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation* ²	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)
		0% of rated speed max. (for a load fluctuation of ±10%)
		±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)
Torque Control Precision (Repeatability)	±1%	
Soft Start Time Setting		0 s to 10 s (Can be set separately for acceleration and deceleration.)
I/O Signals	Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.

*1. If you combine a Σ-7-Series SERVOPACK with a Σ-V-Series Option Module, the following Σ-V-Series SERVO-PACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable surrounding range cannot be increased by derating.

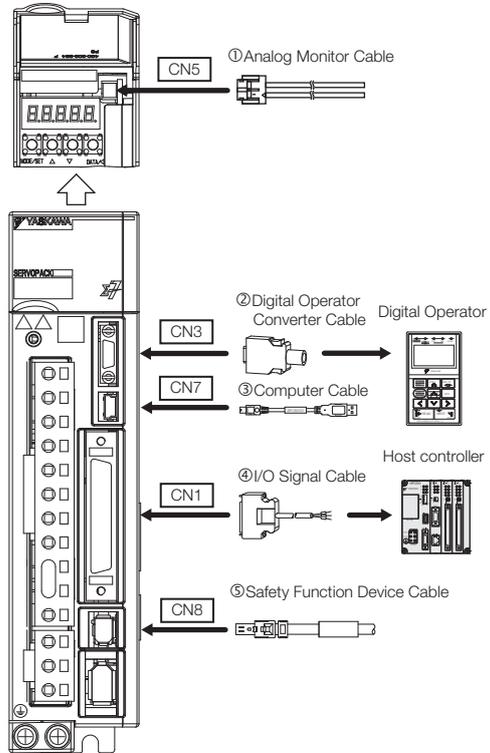

*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

📖 *Σ-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: S1EP S800001 32)*

Code	Name	Length (L)	Order Number	Appearance	
①	Analog Monitor Cable	1 m	JZSP-CA01-E		
②	Digital Operator Converter Cable	0.3 m	JZSP-CVS05-A3-E*1		
③	Computer Cable	2.5 m	JZSP-CVS06-02-E

		Connector Kit*3	Contact Tyco Electronics Japan G.K. Product name: Industrial Mini I/O D-shape Type 1 Plug Connector Kit Model number: 2013595-1		

*1. This Converter Cable is required to use the Σ-III-series Digital Operator (JZSP-OP05A) for Σ-7-series SERVOPACKs.

*2. When using safety functions, connect this Cable to the safety function devices.
When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

*3. Use the Connector Kit when you make cables yourself.

Option Module	Option Module cannot be attached.

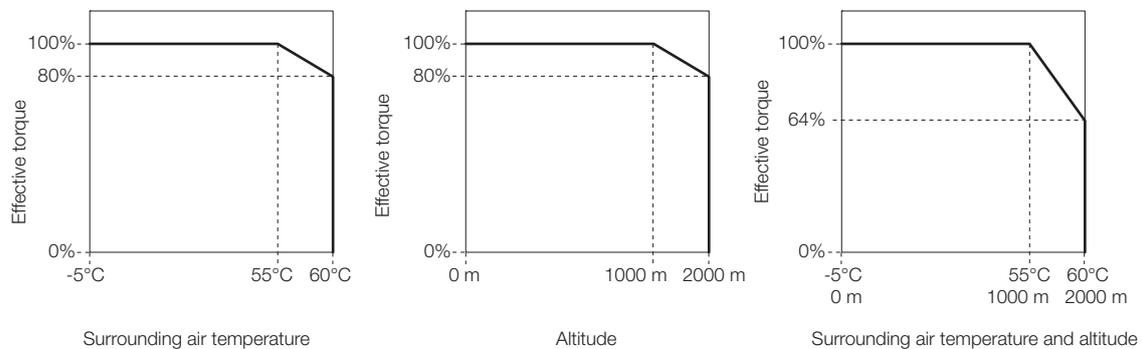

* The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

Derating Specifications

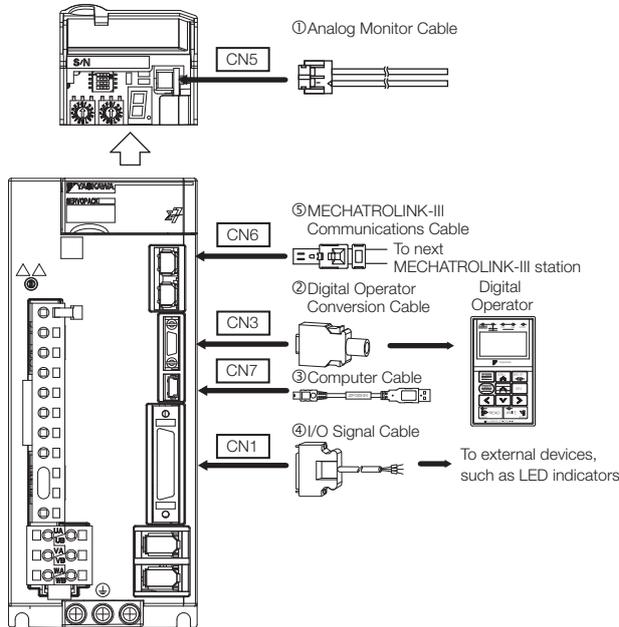

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

◆ SGD7W-1R6A, -2R8A, -5R5A, and -7R6A

Selecting Cables

◆ System Configurations

◆ Selection Table

Important

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

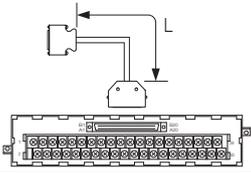

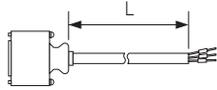

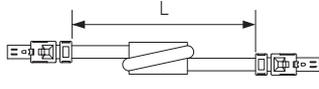

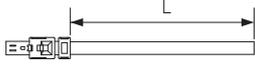

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

	Control Circuit Power Loss [W]	17	17	17	
	Built-in Regenerative Resistor Power Loss [W]	8	8	16	
	Total Power Loss [W]	49	69	87	
Regenerative Resistor	Built-In Regenerative Resistor	Resistance [Ω]	40	40	12
		Capacity [W]	40	40	60
	Minimum Allowable External Resistance [Ω]	40	40	12	
Overvoltage Category		III			

*1. If you use the SGD7C-5R5A with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.

If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65% ((90% + 40%)/2 = 65%).

*2. This is the net value at the rated load. However, a load ratio of 65% was used for the SGD7W-5R5A.

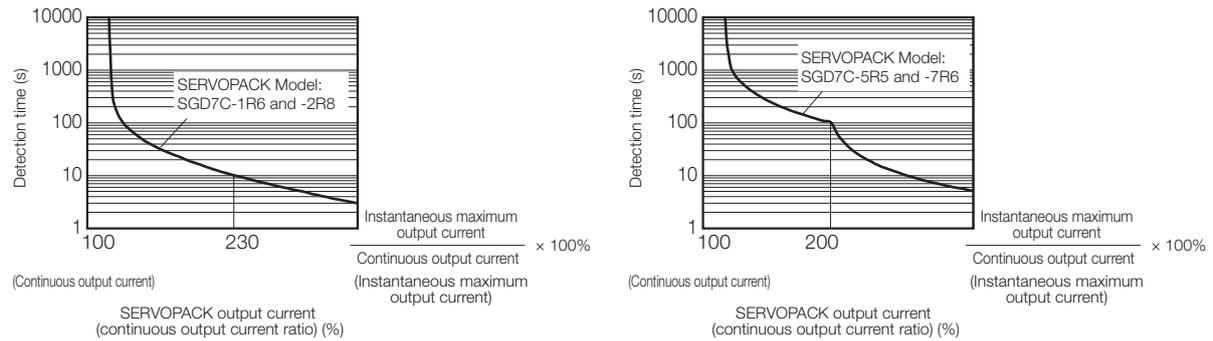

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a Yaskawa-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

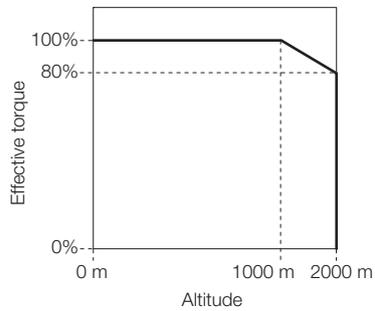

General Specifications

Item		Specification
Control Method		IGBT-based PWM control, sine wave current drive
Feedback	With Rotary Servo-motor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)
	With Linear Servo-motor	<ul style="list-style-type: none"> • Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) • Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)
Environmental Conditions	Surrounding Air Temperature	0°C to 55°C
	Storage Temperature	-20°C to 85°C
	Surrounding Air Humidity	10% to 95% relative humidity (with no freezing or condensation)
	Storage Humidity	10% to 95% relative humidity (with no freezing or condensation)
	Vibration Resistance	4.9 m/s ²
	Shock Resistance	19.6 m/s ²
	Protection Class	IP20
	Pollution Degree	2 <ul style="list-style-type: none"> • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no excessive dust, salts, or iron dust.
	Altitude	1,000 m max. Note: With derating, usage is possible between 1,000 m and 2,000 m. Refer to the following section for the derating specifications.  Derating Specifications (page 424)
	Power Frequency Magnetic Field	30 A/m (50 Hz/60 Hz), IEC 61000-4-8, Level 4
Others	Must be no exposure to electrostatic noise or radiation.	
Applicable Standards		UL 61800-5-1 (E147823), CSA C22.2 No.274, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, and EN 61800-5-1
Mounting		Base-mounted or rack-mounted

Derating Specifications

If you use the SERVOPACK at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graph.

◆ SGD7C-1R6A, -2R8A, -5R5A, and -7R6A

Servo Section Specifications

Item		Specification	
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)	
	Coefficient of Speed Fluctuation*	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)	
		0% of rated speed max. (for a load fluctuation of ±10%)	
		±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)	
Torque Control Precision (Repeatability)	±1%		
Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)		
I/O Signals	Overheat Protection Input	Number of input points: 2 Input voltage range (0 V to 5 V)	
	Sequence Input Signals	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 12 Input method: Sink inputs or source inputs Input Signals: <ul style="list-style-type: none"> • P-OT (Forward Drive Prohibit Input) and N-OT (Reverse Drive Prohibit Input) signals • /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals • /DEC (Origin Return Deceleration Switch) signal • /EXT1 to /EXT3 (External Latch Input 1 to 3) signals • FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.
		Sequence Output Signals	Fixed Outputs
	Output Signals That Can Be Allocated		Allowable voltage range: 5 VDC to 30 VDC Number of outputs points: 5 (Photocoupler outputs (isolated) are used.) Output Signals: <ul style="list-style-type: none"> • /COIN (Positioning Completion) signal • /V-CMP (Speed Coincidence Detection) signal • /TGON (Rotation Detection) signal • /S-RDY (Servo Ready) signal • /CLT (Torque Limit Detection) signal • /VLT (Speed Limit Detection) signal • /BK (Brake) signal • /WARN (Warning) signal • /NEAR (Near) signal A signal can be allocated and the positive and negative logic can be changed.
Communications	USB Communications (CN7)	Interface	Personal computer (with SigmaWin+)
		Communications Standard	Conforms to USB2.0 standard (12 Mbps).
Displays/Indicators		CHARGE and PWR indicators, and two, one-digit seven-segment displays	
Reference Method		Reference with built-in controller	
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.	
Regenerative Processing		Built-in	
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit Input) or N-OT (Reverse Drive Prohibit Input) signal	
Protective Functions		Overcurrent, overvoltage, undervoltage, overload, regeneration error, etc.	
Utility Functions		Gain adjustment, alarm history, jogging, origin search, etc.	
Applicable Option Modules		None	

* The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

Controller Section Specifications

This section provides the specifications of the Controller Section.

◆ Hardware Specifications

Item	Specification
Flash Memory	Capacity: 24 MB (15 MB of user memory)
SDRAM	Capacity: 256 MB
MRAM	Capacity: 4 MB

◆ Motion Control Function Module Specifications

Module	Item	Specification	
SVD	Number of Controlled Axes*1	2	
	Reference Update Cycle (High-Speed Scan Cycle Performed by the CPU)	500 μs to 32.0 ms	
	Register Ranges	Registers for two axes are assigned from the registers for each circuit. Refer to the following manual for details.  Σ-7-Series Σ-7C SERVOPACK Motion Control User's Manual (Manual No.: SIEP S800002 03)	
SVC4	Number of Controlled Axes*1	4	
	Reference Update Cycle (High-Speed Scan Cycle Performed by the CPU)	500 μs to 32.0 ms	
	Register Ranges	Registers for four axes are assigned from the registers for each circuit. Refer to the following manuals for details.  Σ-7-Series Σ-7C SERVOPACK Motion Control User's Manual (Manual No.: SIEP S800002 03)	
	MECHATROLINK-III communications	Communications Interface	Master
		Communications Cycle (Reference Update Cycle)	500 μs to 32.0 ms
		Transmission Cycle*2	125 μs, 250 μs, 500 μs, or 1 ms
		Communications Cable	MECHATROLINK-III Communications Cable
		Maximum Number of Connectable Stations	8
		Topology	Cascade connections, star connections, or mixed star-cascade connections
		Terminating Resistance	Not required.
Connectable Slave Devices		SERVOPACKs, Stepping Motor Drivers, Inverters, I/O Modules, and Machine Controllers that support MECHATROLINK-III communications	
Supported Profiles	MECHATROLINK-III Servo Standard, MECHATROLINK-III I/O Standard, MECHATROLINK-III Inverter Standard, and MECHATROLINK-III Stepping Motor Standard		
SVR4	Number of Controlled Axes*1	4	
	Reference Update Cycle (High-Speed Scan Cycle Performed by the CPU)	500 μs to 32.0 ms	
	Register Ranges	Registers for four axes are assigned from the registers for each circuit. Refer to the following manuals for details.  Σ-7-Series Σ-7C SERVOPACK Motion Control User's Manual (Manual No.: SIEP S800002 03)	

*1. A maximum of six axes can be controlled with the Motion Control Function Module in a Σ-7C SERVOPACK. Do not control more than a total of six axes with one Motion Control Function Module.

*2. The transmission cycle is the cycle in which the SVC4 and the slave devices perform communications on the MECHATROLINK-III transmission path.

◆ M-EXECUTOR Specifications

■ Registerable Programs

Program Type		Number of Registered Programs
Motion Programs		32*
Sequence Programs	Startup	1
	Interrupt	Not possible.
	H scan	32*
	L scan	32*

* The combined total of motion programs and sequence programs must not exceed 32.

■ Program Control Methods

You can use the following control methods for the programs that are registered in the M-EXECUTOR:

Item	Motion Programs	Sequence Programs										
Execution Method	Sequential execution	Startup: Event execution H scan: Scan execution L scan: Scan execution										
System Work	The same number is used for the definition number and system work number.											
	<table border="1"> <thead> <tr> <th>Definition No.</th> <th>System Work Number</th> </tr> </thead> <tbody> <tr> <td>No.1</td> <td>1</td> </tr> <tr> <td>No.2</td> <td>2</td> </tr> <tr> <td>⋮</td> <td>⋮</td> </tr> <tr> <td>No.32</td> <td>32</td> </tr> </tbody> </table>		Definition No.	System Work Number	No.1	1	No.2	2	⋮	⋮	No.32	32
Definition No.	System Work Number											
No.1	1											
No.2	2											
⋮	⋮											
No.32	32											
Program Designation Method	Direct designation or indirect designation	Direct designation										
Program Execution Method	Register the program in the definitions and start execution by turning ON the start signal.	Execution is started when the program is registered in the definitions.										
Interpolation Override Setting	Supported.	Not supported.										
I/O Link Definitions	Supported.	Not supported.										
Motion Program Status Reporting in S Registers	Supported.											
Number of Parallel Forks	Up to 8 Main: 4 forks, Sub: 2 forks Main: 8 forks Main: 2 forks, Sub:4 forks Sub: 8 forks	No forks										
Error Diagram Execution When an Operation Error Occurs	Supported.											

◆ USB Memory Specifications

Item	Specification	Remarks
Supported Media	USB memory device	Refer to the following section for details.  ■ Recommended USB Memory Device (page 431)
Applicable FAT	FAT16/32	–
Maximum Number of Nested Directories	10	–

■ Recommended USB Memory Device

The following USB memory device is recommended. It can be purchased from Yaskawa.

Model	Specification	Manufacturer
SFU24096D1BP1TO-C-QT-111-CAP	4-GB USB memory	Swissbit Japan Inc.

◆ IO16 Function Module Specifications

The following table gives the specifications of the IO16 Function Module. There are 16 digital inputs and 16 digital outputs in the IO16 Function Module.

Item	Specification	
Digital Inputs	Number of Inputs	16
	Input Method	Sink/source
	Isolation Method	Photocouplers
	Input Voltage	24 VDC ±20%
	Input Current	5 mA (typical)
	ON Voltage/Current	15 V min./2 mA min.
	OFF Voltage/Current	5 V max./1 mA max.
	ON/OFF Time	0.01 ms + Digital filter setting
	Digital Filter Setting	0 to 65,535 μs
	Number of Commons	2 (8 points per common)
	Others	DI_00 is also used for interrupt signals. DI_01 is also used as the pulse latch input.
Digital Outputs	Number of Outputs	16
	Output Method	Transistor open-collector sink outputs
	Isolation Method	Photocouplers
	Output Voltage	24 VDC (20 V to 30 V)
	Output Current	50 mA max.
	Leakage Current When OFF	0.1 mA max.
	ON/OFF Time	0.01 μs (for output current of 85 mA)
	Number of Commons	2 (8 points per common)
	Output Protection	Thermistor (automatic recovery after blow out)
	Others	DO_00 is also used as the Match Output.

◆ Counter Specifications

The following table gives the specifications of counter. The counter uses a pulse input on one channel.

Item	Specification	
Pulse Input	Number of Inputs	1 (phase A, B, or Z input)
	Input Circuits	Phases A and B: 5-V differential input, not isolated, maximum frequency: 4 MHz Phase Z: 5-V, 12-V, or 24-V photocoupler input, maximum frequency: 500 kHz
	Input Modes	Phases A and B, sign, and incrementing/decrementing
	Latch Input	Pulses are latched for phase Z or DI_01. Response Times for Phase-Z Input ON: 1 μs max. OFF: 1 μs max. Response Times for DI_01 Input ON: 60 μs max. OFF: 0.5 ms max.
	Other Functions	Match detection, counter preset and clear, electronic gear conversion, phase-C (phase-Z), and digital filter

◆ System Register Specifications

This section shows the overall structure of the system registers.

Refer to the following manuals for details.

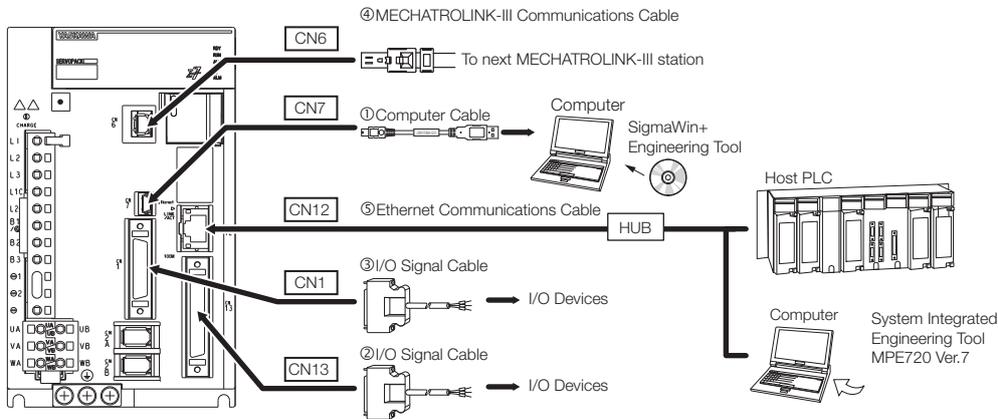

📖 *Σ-7-Series Σ-7C SERVOPACK Product Manual* (Manual No.: SIEP S800002 04)

📖 *Σ-7-Series Σ-7C SERVOPACK Troubleshooting Manual* (Manual No.: SIEP S800002 07)

Register Addresses	Contents
SW00000 to SW00029	System Service Registers

SW27600 to SW29775	Maintenance Monitor
SW29776 to SW65534	Reserved.

Selecting Cables

◆ System Configurations

◆ Selection Table

1. Use the cable specified by Yaskawa for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by Yaskawa for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Note: Refer to the following manual for the following information.

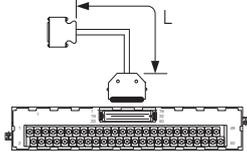

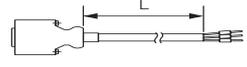

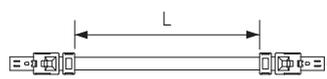

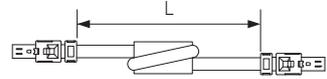

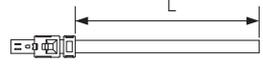

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual Device connectors for cables

📖 Σ-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

Peripheral Devices

*1. The peripheral devices are described using a MECHATROLINK-III Communications Reference, Three-phase 200 VAC SERVOPACK as an example. The shapes of the connectors may be different for other interfaces.

*2. The connected devices depend on the interface.

For MECHATROLINK-II communications references: Other MECHATROLINK-II stations

For analog voltage/pulse train references: There is no CN6 connector.

*3. A Holding Brake Power Supply Unit is required to use a Servomotor with a Holding Brake. Holding Brake Power Supply Units for 24 VDC are not provided by Yaskawa. Obtain these from other manufacturers. Never connect Holding Brake Power Supply Units with different output voltages to a SERVOPACK. Overcurrent may result in burning in the brake.

*4. If you use a Servomotor with a Holding Brake, select a brake relay according to the power supply voltage and current of the brake. Yaskawa does not recommend any particular brake relays. Select an appropriate brake relay using the selection method of the brake relay manufacturer.

*5. The power supply for the holding brake is not provided by Yaskawa. Select a power supply based on the holding brake specifications. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.

*6. For SERVOPACK cables, refer to the selection table for each type of SERVOPACK.

Molded-case Circuit Breakers and Fuses

Using an AC Power Supply

Use a molded-case circuit breaker and fuse to protect the power supply line. They protect the power line by shutting OFF the circuit when overcurrent is detected. Select these devices based on the information in the following tables.

Note: The following tables also provide the net values of the current capacity and inrush current. Select a fuse and a molded-case circuit breaker that meet the following conditions.

- Main circuit and control circuit: No breaking at three times the current value given in the table for 5 s.
- Inrush current: No breaking at the current value given in the table for 20 ms.

◆ Σ-7W SERVOPACKs

Main Circuit Power Supply	Maximum Applicable Motor Capacity per Axis [kW]	SERVOPACK Model: SGD7W-	Power Supply Capacity per SERVOPACK [kVA]*1	Current Capacity		Inrush Current		Rated Voltage	
				Main Circuit [Arms]*1	Control Power Supply [Arms]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Fuse [V]	MCCB [V]
Three-phase, 200 VAC	0.2	1R6A	1.0	2.5	0.25	34	34	250	240
	0.4	2R8A	1.9	4.7					
	0.75	5R5A	3.2	7.8					
	1.0	7R6A	4.5	11					
Single-phase, 200 VAC	0.2	1R6A	1.3	5.5					
	0.4	2R8A	2.4	11					
	0.75	5R5A*2	2.7	12					

*1. This is the net value at the rated load.

*2. If you use the SGD7W-5R5A with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.

If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65% $((90\% + 40\%)/2 = 65\%)$.

◆ Σ-7C SERVOPACKs

Main Circuit Power Supply	Maximum Applicable Motor Capacity per Axis [kW]	SERVOPACK Model: SGM7C-	Power Supply Capacity per SERVOPACK [kVA]*1	Current Capacity		Inrush Current		Rated Voltage	
				Main Circuit [Arms]*1	Control Power Supply [Arms]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Fuse [V]	MCCB [V]
Three-phase, 200 VAC	0.2	1R6A	1.0	2.5	0.25	34	34	250	240
	0.4	2R8A	1.9	4.7					
	0.75	5R5A	3.2	7.8					
	1.0	7R6A	4.5	11					
Single-phase, 200 VAC	0.2	1R6A	1.3	5.5					
	0.4	2R8A	2.4	11					
	0.75	5R5A*2	2.7	12					

*1. This is the net value at the rated load.

*2. If you use the SGM7C-5R5A with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.

If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65% $((90\% + 40\%)/2 = 65\%)$.

Using a DC Power Supply

This section gives the power supply specifications for using a DC power supply input. Use the Fuses given in the following tables to protect the power supply line and SERVOPACK. They protect the power line by shutting OFF the circuit when overcurrent is detected.

Note: The following tables provide the net values of the current capacity and inrush current.

◆ Σ-7S SERVOPACKs

Main Circuit Power Supply	SERVOPACK Model: SGD7S-	Power Supply Capacity per SERVOPACK [kVA] ^{*1}	Current Capacity		Inrush Current		External Fuse					
			Main Circuit [Arms] ^{*1}	Control Power Supply [Arms]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Order Number ^{*2}	Current Rating [A]	Voltage Rating [Vdc]			
270 VDC	R70A	0.2	0.5	0.2	34	34	3,5URGJ17/16UL	16	400			
	R90A	0.3	1.0									
	1R6A	0.5	1.5									
	2R8A	1.0	3.0									
	3R8A	1.3	3.8	0.2			3,5URGJ17/40UL	40				
	5R5A	1.6	4.9									
	7R6A	2.3	6.9									
	120A	3.2	11	0.2			34	34		3,5URGJ17/63UL	63	
	120A□□□□008			0.25								
	180A											14
	200A											20
	330A	7.5	34	0.3			68 ^{*3} (5 Ω external)	3,5URGJ17/100UL		100		
	470A	10.7	36									
	550A	14.6	48									
590A	21.7	68	0.4	114 ^{*3} (3 Ω external)	3,5URGJ23/200UL	200						
780A	29.6	92										

*1. This is the net value at the rated load.

*2. These Fuses are manufactured by MERSEN Japan.

*3. If you use a DC power supply input with any of the following SERVOPACKs, externally connect an inrush current limiting circuit and use the power ON and OFF sequences recommended by Yaskawa: SGD7S-330A, -470A, -550A, -590A, or -780A.

There is a risk of equipment damage.

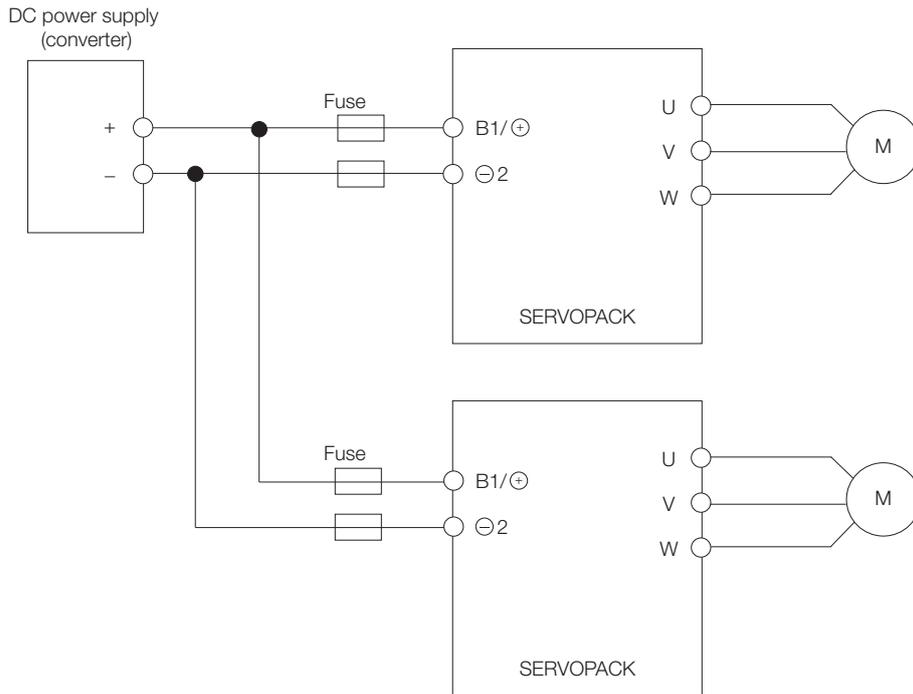

For information on the power ON and OFF sequences, refer to the product manual for the type of references used by your SERVOPACK.

◆ Σ-7W SERVOPACKs

Main Circuit Power Supply	SERVOPACK Model: SGD7W-	Power Supply Capacity per SERVOPACK [kVA] ^{*1}	Current Capacity		Inrush Current		External Fuse		
			Main Circuit [Arms] ^{*1}	Control Power Supply [Arms]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Order Number ^{*2}	Current Rating [A]	Voltage Rating [Vdc]
270 VDC	1R6A	1	3.0	0.25	34	34	3,5URGJ17/40UL	40	400
	2R8A	1.9	5.8						
	5R5A	3.2	9.7				3,5URGJ17/63UL	63	
	7R6A	4.5	14						

*1. This is the net value at the rated load.

*2. These Fuses are manufactured by MERSEN Japan.

Note: If you connect more than one SERVOPACK to the same DC power supply, connect Fuses for each SERVOPACK.

SERVOPACK Main Circuit Wires

This section describes the main circuit wires for SERVOPACKS.

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

Note: To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

Three-phase, 200-VAC Wires for Σ -7S SERVOPACKS

SERVOPACK Model: SGD7S-	Terminals		Wire Size	Screw Size	Tightening Torque [N·m]
R70A	Main Circuit Power Supply Cable	L1, L2, L3	AWG16 (1.25 mm ²)	-	-

Wire Types

The following table shows the wire sizes and allowable currents for three bundled leads.

HIV Specifications*		Allowable Current at Surrounding Air Temperatures [Arms]		
Nominal Cross-sectional Area [mm ²]	Configuration [Wires/mm]	30°C	40°C	50°C
0.9	7/0.4	15	13	11
1.25	7/0.45	16	14	12
2.0	7/0.6	23	20	17
3.5	7/0.8	32	28	24
5.5	7/1.0	42	37	31
8.0	7/1.2	52	46	39
14.0	7/1.6	75	67	56
22.0	7/2.0	98	87	73
38.0	7/2.6	138	122	103

* This is reference data based on JIS C3317 600-V-grade heat-resistant polyvinyl chloride-insulated wires (HIV).

Crimp Terminals and Insulating Sleeves

If you use crimp terminals for wiring, use insulating sleeves. Do not allow the crimp terminals to come close to adjacent terminals or the case.

To comply with UL standards, you must use UL-compliant closed-loop crimp terminals and insulating sleeves for the main circuit terminals. Use the tool recommended by the crimp terminal manufacturer to attach the crimp terminals.

The following tables give the recommended tightening torques, closed-loop crimp terminals, and insulating sleeves in sets. Use the set that is suitable for your model and wire size.

Surge Absorbers (Varistors) and Diodes for Holding Brake Power Supplies

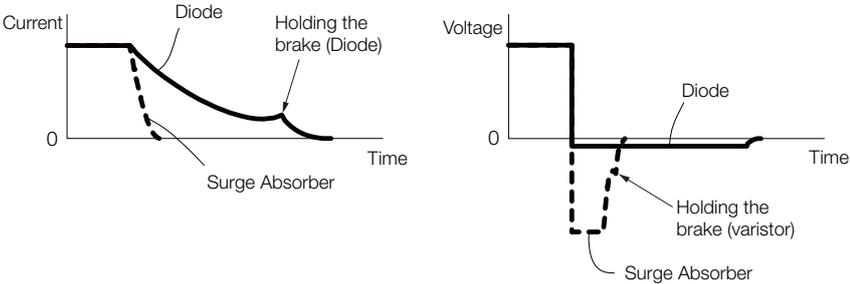

Surge Absorbers (varistors) and Diodes for holding brake power supplies help prevent damage to brake coils caused by voltage surges.

If you use a Servomotor with a Holding Brake and switch the brake power supply circuit on the DC side, connect a Surge Absorber (varistor) or Diode that is suitable for the brake power supply voltage and current.

Note

- When you select a Surge Absorber, varistor, or Diode for your application, consider the service life and test all operations, including the brake timing, before you use the Servomotor.
- If you connect an SSR (i.e., a semiconductor relay) to switch the brake circuit, use a Diode.
- If you connect a Diode, more time is required to brake than with a Surge Absorber. (Refer to the following figure.) If you use a diode, consider this in the application.

The figure contains two graphs. The left graph plots Current vs. Time. It shows two curves: a solid line for 'Diode' and a dashed line for 'Surge Absorber'. Both start at a constant current level. When the brake is released, the current drops. The 'Surge Absorber' curve drops sharply to zero, while the 'Diode' curve decays more gradually. Labels include 'Current', 'Time', '0', 'Diode', 'Surge Absorber', and 'Holding the brake (Diode)'. The right graph plots Voltage vs. Time. It shows two curves: a solid line for 'Diode' and a dashed line for 'Surge Absorber'. Both start at a constant voltage level. When the brake is released, the voltage drops. The 'Surge Absorber' curve drops sharply to zero, while the 'Diode' curve decays more gradually. Labels include 'Voltage', 'Time', '0', 'Diode', 'Surge Absorber', and 'Holding the brake (varistor)'.

◆ Surge Absorbers (Varistors) for Holding Brake Power Supplies

Use the following table as reference in selecting a Surge Absorber. Elements were selected for a Surge Absorber surrounding air temperature range of -20°C to 60°C and an ON/OFF switching frequency of 10 times or less per minute. The information in this table is for reference only, and does not ensure operation in combination with the holding brake.

Holding Brake Power Supply Voltage		24 VDC	
Manufacturer		Nippon Chemi-Con Corporation	Semitec Corporation
		Order Number	
Brake Rated Current	1 A max.	TNR5V121K	Z5D121
	2 A max.	TNR7V121K	Z7D121
	4 A max.	TNR10V121K	Z10D121
	8 A max.	TNR14V121K	Z15D121

◆ Diodes for Holding Brake Power Supplies

Select a Diode for the holding brake power supply with a rated current that is greater than that of the holding brake and with the recommended withstand voltage given in the following table.

Diodes are not provided by Yaskawa.

Holding Brake Power Supply Unit Specifications		Withstand Voltage
Rated Output Voltage	Input Voltage	
24 VDC	200 V	100 V to 200 V

Regenerative Resistors

Types of Regenerative Resistors

The following regenerative resistors can be used.

- Built-in regenerative resistors: Some models of SERVOPACKs have regenerative resistors built into them.
- External regenerative resistors: These resistors are used when the smoothing capacitor and built-in regenerative resistor in the SERVOPACK cannot consume all of the regenerative power. Use Yaskawa's SigmaSize+, an AC Servo drive capacity selection program, to determine if a regenerative resistor is required.

Note: If you use an External Regenerative Resistor, you must change the setting of the Pn600 (Regenerative Resistor Capacity) or Pn603 (Regenerative Resistance) parameters.

Selection Table

SERVOPACK Model			Built-In Regenerative Resistor	External Regenerative Resistor	Contents
SGD7S-	SGD7W-	SGD7C-			
R70A, R90A, 1R6A, 2R8A, R70F, R90F, 2R1F, 2R8F	–	–	None	Basically not required	There is no built-in regenerative resistor, but normally an external regenerative resistor is not required. Install an external regenerative resistor when the smoothing capacitor in the SERVOPACK cannot process all the regenerative power.*1
3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A	1R6A, 2R8A, 5R5A, 7R6A	1R6A, 2R8A, 5R5A, 7R6A	Standard feature*2	Basically not required	A built-in regenerative resistor is provided as a standard feature. Install an external regenerative resistor when the built-in regenerative resistor cannot process all the regenerative power.*1
470A, 550A, 590A, 780A	–	–	None	Required.*3	A built-in regenerative resistor is not provided. An External Regenerative Resistor is required. If the External Regenerative Resistor is not connected to the SERVOPACK, a Regeneration Alarm (A.300) will occur.

*1. Use Yaskawa's SigmaSize+, an AC Servo drive capacity selection program, to select an external regenerative resistor.

*2. Refer to the following section for the specifications of built-in regenerative resistors.

 [Built-In Regenerative Resistor \(page 472\)](#)

*3. Regenerative Resistor Units are available. Refer to the following sections for details.

 [Regenerative Resistor Units \(page 473\)](#)

Built-In Regenerative Resistor

The following table gives the specifications of the built-in regenerative resistors in the SERVOPACKs and the amount of regenerative power (average values) that they can process.

SERVOPACK Model			Built-In Regenerative Resistor		Regenerative Power Processing Capacity of Built-In Regenerative Resistor [W]	Minimum Allowable Resistance [Ω]
SGD7S-	SGD7W-	SGD7C-	Resistance [Ω]	Capacity [W]		
R70A, R90A, 1R6A, 2R8A, R70F, R90F, 2R1F, 2R8F	-	-	-	-	-	40
3R8A, 5R5A, 7R6A	1R6A, 2R8A	1R6A, 2R8A	40	40	8	40
120A	-	-	20	60	10	20
120A□□□008, 180A, 200A	5R5A, 7R6A	5R5A, 7R6A	12	60	16	12
330A	-	-	8	180	36	8
470A	-	-	(6.25) ^{*1}	(880) ^{*1}	(180) ^{*1}	5.8
550A, 590A, 780A	-	-	(3.13) ^{*2}	(1760) ^{*2}	(350) ^{*2}	2.9

*1. Values in parentheses are for the optional JUSP-RA04-E Regenerative Resistor Unit.

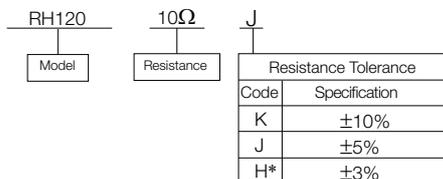

*2. Values in parentheses are for the optional JUSP-RA05-E Regenerative Resistor Unit.

External Regenerative Resistors

Model	Specification	Mass	Wire Size	Manufacturer	Inquiries
RH120	70 W, 1 Ω to 100 Ω	282 g	AWG16 (1.25 mm ²)	Iwaki Musen Kenkyusho Co., Ltd.	Yaskawa Controls Co., Ltd.
RH150	90 W, 1 Ω to 100 Ω	412 g	AWG16 (1.25 mm ²)		
RH220	120 W, 1 Ω to 100 Ω	500 g	AWG16 (1.25 mm ²)		
RH220B	120 W, 1 Ω to 100 Ω	495 g	AWG14 (2.0 mm ²)		
RH300C	200 W, 1 Ω to 10 k Ω	850 g	AWG14 (2.0 mm ²)		
RH450	150 W, 1 Ω to 100 Ω	880 g	AWG14 (2.0 mm ²)		
RH450FY	150 W, 2 Ω to 100 Ω	1.3 kg	AWG14 (2.0 mm ²)		
RH500	300 W, 2 Ω to 50 Ω	1.4 kg	AWG14 (2.0 mm ²)		

Note: 1. Consult Yaskawa Controls Co., Ltd. if you require a RoHS-compliant resistor.

2. Consult Yaskawa Controls Co., Ltd. for the model numbers and specifications of resistors with Thermal Protector.

* There is no RH450FY model that has a resistance tolerance of H ($\pm 3\%$).

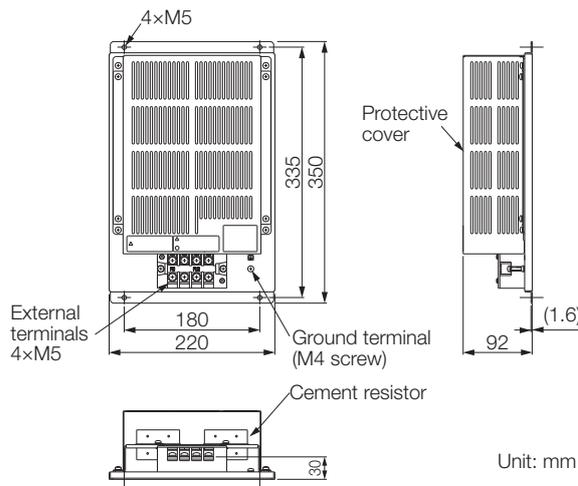

Regenerative Resistor Units

SERVOPACK Model: SGD7S-	Regenerative Resistor Unit Model	Specifications	Allowable Power Loss
470A	JUSP-RA04-E	6.25 Ω , 880 W	180 W
550A, 590A, or 780A	JUSP-RA05-E	3.13 Ω , 1,760 W	350 W

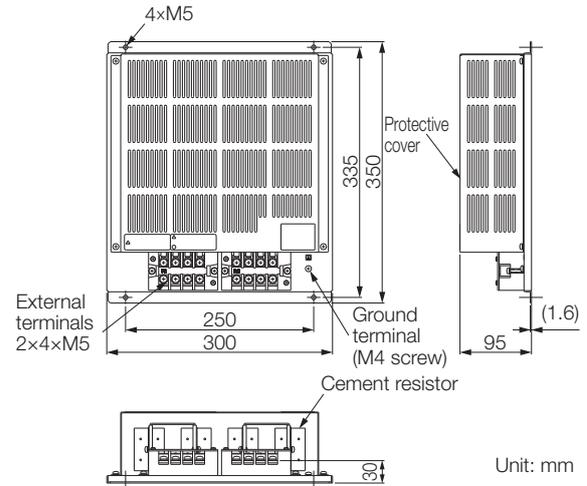

Note: If you use only the above Regenerative Resistor Units, you do not need to change the setting of the Pn600 (Regenerative Resistor Capacity) or Pn603 (Regenerative Resistance) parameters.

◆ External Dimensions

■ JUSP-RA04-E

■ JUSP-RA05-E

Batteries for Servomotors with Absolute Encoders

If you use an absolute encoder, you can use an Encoder Cable with a Battery Case connected to it to supply power and retain the absolute position data.

You can also retain the absolute position data by supplying power from a battery on the host controller.

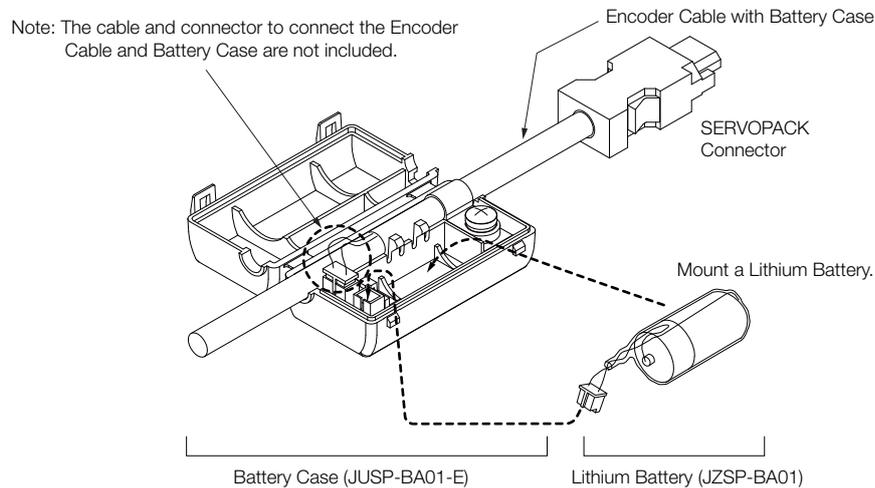

Note: A Battery Case is not required if you use a Servomotor with a Batteryless Absolute Encoder and connect a battery to the host controller.

Using Encoder Cables with Battery Cases

A Battery Case is attached to an Encoder Cable with a Battery Case. To replace the battery, obtain a Lithium Battery (JZSP-BA01) and mount it in the Battery Case.

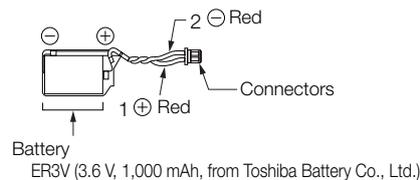

1. You cannot attach the Battery Case to an Incremental Encoder Cable.
2. Install the Battery Case where the surrounding air temperature is between -5°C and 60°C.

◆ Selection Table

Name	Order Number	Remarks
Battery Case (case only)	JZSP-BA01-E	The Encoder Cable and Battery are not included. (This is a replacement part for a damaged Battery Case.)
Lithium Battery	JZSP-BA01	This is a special battery that is mounted into the Battery Case.

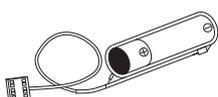

◆ Lithium Battery Dimensional Drawing

When Installing a Battery on the Host Controller

Use a battery that meets the specifications of the host controller.

Use the recommended Battery given in the following table or the equivalent.

Inrush Current Suppression Devices

Inrush current suppression devices prevent equipment from being damaged by inrush current.

They are used only when using a SERVOPACK of 5 kW or higher (SGD7S-330A, -470A, -550A, -590A, or -780A) with a DC power supply input.

Selection Table

◆ External Inrush Current Suppression Resistors

Main Circuit Power Supply	SERVO-PACK Model: SGD7S-	External Inrush Current Suppression Resistor			Manufacturer	Inquiries
		Order Number	Resistance [Ω]	Rated Power [W]		
270 VDC	330A	RH120-5 Ω J	5	70	Iwaki Musen Kenkyusho Co., Ltd.	Yaskawa Controls Co., Ltd.
	470A					
	550A					
	590A	RH120-3 Ω J	3			
	780A					

◆ Inrush Current Suppression Resistor Short Relays

Main Circuit Power Supply	SERVO-PACK Model: SGD7S-	Main Circuit DC Current [Arms]	Contact Specification	Recommended Inrush Current Suppression Resistor Short Relay			Manufacturer
				Model	Voltage Rating [Vdc]	Current Rating [A]	
270 VDC	330A	34	NO	G9EA-1-B G9EA-1-B-CA G9EA-1-B-CA* ¹ G9EC-1-B* ²	400	60	OMRON Corporation
	470A	36				100	
	550A	48				200	
	590A	68					
	780A	92					

*1. Connect two Relays in parallel. Also, maintain the same resistance between the DC power supply and SERVOPACK for the wiring for each Relay.

*2. This Relay is applicable only when the temperature of the Relay installation environment is 50°C or less.

Software

SigmaSize+: AC Servo Capacity Selection Program

You can use the SigmaSize+ to select Servomotors and SERVOPACKs. There are two versions of the software: A cloud version* and a stand-alone version.

The software supports all standard servo products sold by Yaskawa.

* SigmaSize+ is available in Japan only. Contact your Yaskawa representative for information on this program.

◆ Features

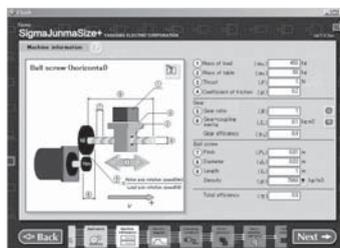

- Provides a vast amount of new product information.
- Lets you select servo products with a wizard.
- You can access and reuse previously entered data.

■ Examples of the Servo Selection Interface

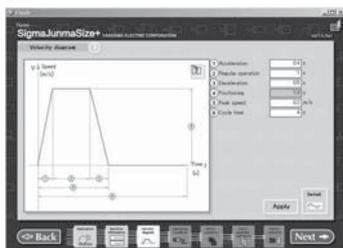

Mechanism Selection View

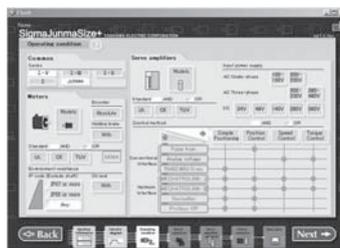

Machine Specification Entry View

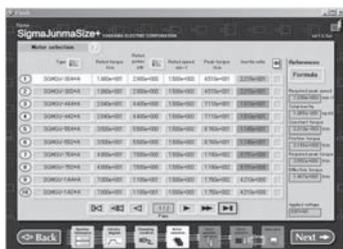

Speed Diagram Entry View

Operating Conditions Selection View

Servomotor Selection View

SERVOPACK Selection View

◆ System Requirements

Item	System Requirement
Browser	Internet Explorer version 10 or later
OS	Windows Vista or Windows 7 (32-bit or 64-bit edition)*
CPU	Pentium 200 MHz min.
Memory	64 MB min. (96 MB or greater recommended)
Available Hard Disk Space	20 MB min.

* 64-bit OS is applicable only for the stand-alone version.

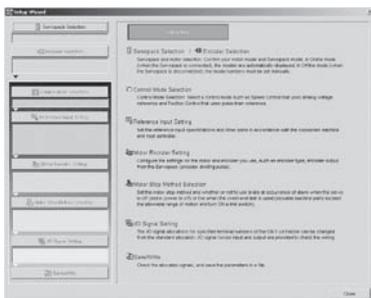

SigmaWin+: AC Servo Drive Engineering Tool

The SigmaWin+ Engineering Tool is used to set up and optimally tune Yaskawa Σ -series Servo Drives.

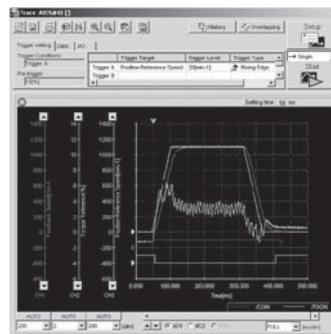

◆ Features

- Set parameters with a wizard.
- Display SERVOPACK data on a computer just like you would on an oscilloscope.
- Estimate moments of inertia and measure vibration frequencies.
- Display alarms and alarm diagnostics.

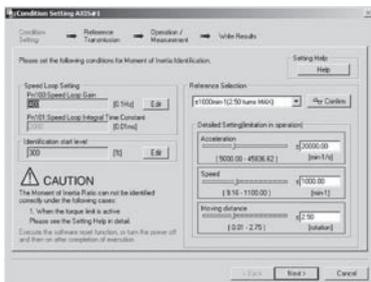

Setting Parameters with a Wizard

Displaying SERVOPACK Data on a Computer Just Like You Would on an Oscilloscope

Estimating Moments of Inertia and Measuring Vibration Frequencies

Displaying Alarms and Alarm Diagnostics

◆ System Requirements

Item	System Requirement	
	Ver.5	Ver.7
Supported Languages	English and Japanese	Japanese, English, and Chinese (simplified)
OS	Windows XP, Windows Vista, or Windows 7 (32-bit or 64-bit edition)	Windows 10, Windows 8, Windows 8.1, or Windows 7 (32-bit or 64-bit edition)
Software Environment	–	.NET Framework 4.5, .NET Framework 4.6
CPU	Pentium 200 MHz min.	1 GHz min. (recommended)
Memory	64 MB min. (96 MB or greater recommended)	1 GB min. (recommended)
Available Hard Disk Space	For Standard Setup: 350 MB min. (400 MB or greater recommended for installation)	500 MB min.
Browser used to display Help	–	Internet Explorer 9 or higher

MPE720 System Integrated Engineering Tool

MPE720 Ver.7 is a system integrated Engineering Tool that provides the complete development functionality to set up, adjust, program, maintain, and inspect not only Controller programs but also all of the devices necessary to design machine installations, including Servo Drives, AC Drives, and Distributed I/O Devices.

It is installed in a PC and operated on a PC interface through a connection between the PC and Machine Controller.

◆ Features

■ Complete Adjustment and Maintenance of Equipment Drive Devices

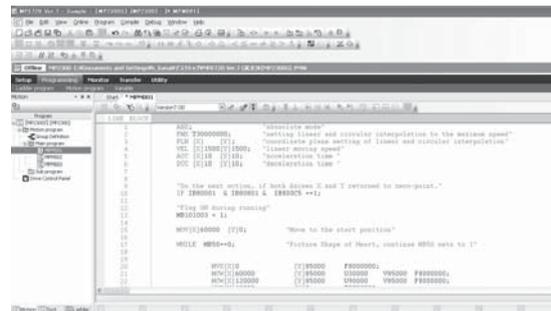

MPE720 Ver.7 connected to the Σ -7C or MP series machine controllers can be used to set up, adjust, and maintain Servo Drives, AC Drives, and I/O Devices connected to a network. There is no need to change connections, which increases efficiency.

■ Greater Efficiency with the Best Programming Method

Ladder Programming

Motion Programming

- The new user interface lets just about anyone easily use the MPE720.
- An improved EXPRESSION instruction simplifies programming calculation in ladder diagrams.
- Support is provided for all types of control, including position, speed, torque, and phase control.
- Positioning and interpolation can be programmed with one instruction.
- Programs can be very easily edited using expressions in a text format.
- New variable programming can provide PC-like programming.

◆ System Requirements

Item	Specification
CPU	1 GHz or more recommended (manufactured by Intel or other companies)
Memory Capacity	1 GB or more recommended*
Available Hard Disk Space	700 MB or more (includes standard workspace memory after installation of MPE720)
Display Resolution	1280 × 800 pixels or more recommended
CD Drive	1 (only for installation)
Communications Ports	RS-232C, Ethernet, MP2100 bus, and USB
OS	Windows 10, Windows 8, Windows 8.1, or Windows 7 (32-bit or 64-bit)
.NET Environment	.NET Framework 4.5
Supported Languages	English and Japanese

* Expand memory if other application programs are run simultaneously with MPE720 on the same computer. Performance may be slow due to the use of memory by multiple application programs that are run simultaneously.
